IRON TEETH IN JURY CHARGE

Judge Dickerson Enjoins Grand Jury to Indict for Liquor Offenses if Beverage Contains Least Bit of Alcohol or of Malt.—U. S. Court Formally Convened.

"If one sells liquor containing any alcohol whatever, or any malt, whatever be the name under which it is sold, it is your duty when the facts are brought before you, to indict that man." These words from Judge Dickerson in his charge to the grand jury constituted the most sensational feature of the opening day of U. S. court.

"There is no such thing as the so-called 'Territorial drinks,'" continued he, "the Territory court of appeals has decided clearly that any drink is unlawful however small be the percent of alcohol or of malt. That is the law." The judge in his charge gave particular emphasis to violations of the liquor law, saying in that connection: "If any of you grand jurors need any bracing up of the backbone, you should find it in the results of the recent election on the prohibition issue, which show this community as well as nearly every other community in the territories, wants laws against liquor and wants them enforced. No longer can be urged the old argument for leniency and looseness, that 'the people do not want the harsh laws against the liquor traffic enforced.'"

In addition the court made special mention, as required by law, of gamb-

petit and the grand juries were impanelled, and directly after noon he delivered his charge to the latter, whereupon he proceeded to sound the civil docket to ascertain how many cases were ready for trial.

The following representative citizens of Pontotoc county constitute the grand jury:

J. C. Cates, foreman, R. E. Haynes, J. A. Biles, J. F. M. Harris, H. C. Russell, T. Spencer, H. A. Hodges, C. M. McClain, N. B. Butler, Price Statler, W. P. Chism, J. S. Gish, Jno. McKoy, M. M. Sanders, J. H. Hilburn, W. W. Burkhart.

These fifteen were sworn in as petit jurors and fifteen more talesmen were ordered summoned:

Vic Florence, W. L. Jones, P. M. Jinks, R. W. Rhea, W. H. Nettles, R. W. Campbell, G. W. Lowrey, Cole Emory, W. H. Ryan, John Murphy, J. W. Salter, J. M. Sawyers, Geo. Garrett, J. R. Allen, Wiley Hunt.

The genial Colonel Tom Smith is at his post as court crier; Miss Alma Harrison, from Chickasha, is the court stenographer this term; Judges Alexander Gullet and Eugene Hamilton represent the government in the prosecutions and before the grand jury.

If you did not get to attend our showing of Fall Dress Goods and Ladies Ready-to-wear Garments on Friday or Saturday, come in during this week and let us show you through.

Our stock is very complete and we are sure that we will be able to please you.

COX-GREER McDONALD CO.

ling, carrying weapons and disturbance of public worship. Also he enjoined the grand jury to investigate the offense of dealing in futures, "an offense productive of evil just as any other gambling is; one not only demoralizing to those who indulge, but also to the farmers by reason of its building up fictitious markets." Intimating that he had been informed that within this district recently there had been municipal officers winking at lawlessness, the judge charged the jury to make thorough investigations. Judge J. T. Dickerson arrived from Chickasha at eleven a. m. and immediately convened court for the three weeks' term at Ada. Before noon the

A. H. Constant and C. G. Moore attend to the clerical work; Deputy U. S. Marshal Ed Brents and a corps of bailiffs are waiting upon the court and grand jury.

GOEBEL'S ASSASSINATION.

Woman's Strange Story—Accuses Mountaineer of Crime.

Richmond, Ind., Sept. 22.—Turner Igo of Farmers, Rowan county, Ky., is charged with killing Governor William Goebel of Kentucky in an affidavit by Mrs. Lula Clark, which was published by the Richmond (Ind.) Item today.

Mrs. Clark's affidavit was taken at

I. HARRIS

Clothier and Gents Furnisher

Indianapolis on April 11, 1907, in the law office of former Gov. W. S. Taylor of Kentucky. She is a niece of Frank Day of Franchburg, Ky., and also of James Williams of the same place. She has a cousin named Gertrude King who lived at Maysville at the time of the killing of Goebel. Miss King at that time was keeping company with John Stanford of Covington, Ky.

Upon the day Goebel was slain the two girls went to Frankfort, Ky. They started to enter the state house by a rear entrance and when on the steps a shot was fired. At the same time they noticed a man standing just outside the door whom they recognized as Stanford.

In a minute the second man came running out of the building dressed like a mountaineer and carried a rifle. He ran to Sanford and said I got the —. That man was recognized by the affiant as her friend, Turner Igo of Farmers, Rowan county, Ky.

Both men ran out of the building to a fence where Sanford gave a pair of shoes which he was carrying to Igo, who exchanged his boots for them. The man then disappeared.

Affiant states that Igo told her at Mount Sterling on Jan. 25, 1900, that he was going to kill Goebel, and she saw him afterward at Jeffersonville.

In., and he reminded her he had fulfilled his promise.

She also says Sanford told Gertrude King a few days prior to Goebel's murder that he intended killing Goebel, saying, "here is my chance to get revenge, the legislature has met."

New Line to the Gulf.

Guthrie, Okla., Sept. 21.—A charter has been granted to the Wichita, Cleveland & Gulf railway, with headquarters at Cleveland, Okla., and \$50,000,000 capital stock, to build 634 miles from Wichita, Kansas, through the counties of Sedgwick, Butler, Cowley and Chautauqua, in Kansas, the counties of Pawnee and Osage in Oklahoma, the Cherokee, Creek and Choctaw Nations, and the states of Arkansas, Texas and Louisiana, to the gulf. The incorporators include David Ratner, J. F. Feathering, J. C. Byers, R. L. Lunsford and A. Cecanko.

Mrs. Bond Passes Away.

Mrs. J. M. Bond, after lingering with slow fever several weeks, began sinking rapidly Sunday, and in spite of all efforts to revive her, passed away Monday morning at 6 o'clock. The remains were shipped to Madill for interment.

Ada Evening News

OTIS B. WEAVER, Editor and Owner
HOWARD PARKER, Associate Editor

Entered as second-class mail matter March 26, 1904, at the post office at Ada, Indian Territory under the Act of Congress March 3, 1879.

THE PRESIDENT AND THE OKLAHOMA CONSTITUTION.

The Oklahoma constitution, under the provisions of the enabling act, which permitted a vote on the question of statehood, must be endorsed by the president before the new state can be admitted to the Union. It is possible that the president will reject the constitution and therefore deny statehood to the two territories; but it is certain that some higher motive will prompt such executive action than the mere fact that Oklahoma elected a democratic state ticket and sent three or four democrats to congress in the election last Tuesday.

The Oklahoma republicans who assume that the constitution will not receive endorsement at the White House because it would admit a democratic state to the Union are making themselves ridiculous in the eyes of the country. The president's duty is a judicial one. The limitations of his powers in the acceptance or rejection of the instrument are limited to two distinct propositions—a determination of the constitution's compliance with the enabling act passed by congress, and the harmony of its provisions with the federal constitution.

Secretary Taft in his speech in Oklahoma City made the president's position clear. For this reason he warned the voters against the defects in their constitution as they affected the citizens of the state. These defects may be apparent to the president and yet prove no bar to his approval of the document as a whole.

Statehood is not to be denied Oklahoma for political reasons. The defeated politicians who take comfort in that assumption will be doomed to disappointment. If they can present no more tangible excuse for the rejection of the constitution than that the state gave a democratic majority or that the beer interests are displeased with the adoption of prohibition, Oklahoma is certain to realize its hopes for immediate statehood.—Kansas City Star.

ROUGH RIDERS IN VAUDVILLE.

Governor Frank Frantz and Colonel Charles Hunter, chairman of the republican state committee, are presenting to the people of the new state a novel spectacle, a kind of rough rider vaudeville act.

Though every man, woman and child in Oklahoma and Indian Territory knows that the democrats have carried the constitution, the state officers and the legislature by overwhelming majorities these two individuals surlily declare it is not so, that there has been fraud in the election and that they will continue their fight against statehood.

They do not say they are fighting statehood, but no one doubts that to be their meaning.

These leaders of a forlorn hope in the recent campaign practically asked the people of these two territories to stultify themselves in the eyes of the nation by voting down the best constitution ever written and defeating statehood after the people had been laboring for statehood for many years.

But the people repudiated these men by an overwhelming vote making such a clean sweep in the election that there is left no room for doubt as to the results.

And yet these worthies have the audacity to appeal before the people and deny that the democrats have won by a landslide, and they dramatically raise the cry of fraud in the election.

So undignified and puerile is their conduct that it merely arouses the risibilities of their neighbors and make them the laughing stock of the powers that be at Washington if they carry their troubles to the national capital.

After all, however, it is really pitiable, and some of their good friends will do them a kindness by drawing the curtain.

It is the end of the last act in that monotonous and trying play, "The Carpetbagger"—Oklahoman.

Judge Dickerson's charge to the grand jury today was all that a clean citizen could ask. He told them not to spare any violator of law, whether he be high or low.

Shawnee Man for Speaker.

Shawnee, Sept. 23.—Milton Bryan, a Shawnee attorney, elected on the democratic ticket to the state legislature, has announced his candidacy for speaker of the house. He served as a member of the last Territorial legislature of Oklahoma and has received the endorsement of several successful candidates of their support.

Today's Cotton Market.

Futures dropped \$2 a bale in New Orleans, \$1.75 in New York. New Orleans spots down 1/4 of a cent—11%. New York spots down 30 points—11.90.

WAS A GREAT RALLY AT ROFF

Amid Great Enthusiasm Democrats of Pontotoc County Ratify Results of the Recent Election.—Jubilant Till Midnight Hour.

It was a roaring big ratification of the election, that jubilee held by the democrats at Roff Saturday night.

The crowd was not so representative of the whole county as desired, because there was not sufficient time to advertise the event well in the country districts, and Ada democrats were unable to secure the special train hoped for. But everybody in Roff was on hand and they made a crowd by themselves. Besides there were a number present from Ada and other places.

The meeting continued in full swing till midnight. Anvils boomed forth, orators smote the air with their eloquence, and the assembled hundreds shouted their jubilation.

Among the speakers of the evening were Delegate Franklin of Madill, Tom Smith and Rev. Hicks of Roff; Henry M. Furman, Robt. Wimbish, R. M. Roddie, and Geo. Thompson of Ada.

The crowd applauded tremendously when Judge Furman, in the following words drew the contrast between the republican eagle and the democratic rooster:

"The principles and practices of the republican and democratic parties are fitly illustrated by their emblems. The emblem of the republican party is the

eagle. The emblem of the democratic party is a rooster. Our republican friends claim that the eagle is a noble bird. But I ask you what noble thing has the eagle ever done. Is it not true that the eagle lives by killing and devouring weaker birds and animals? Is it not true that the eagle is a bird of evil omen and of prey? My friends, the eagle is a highwayman, a pirate, a buchaner and murderer and a thief. Fit emblem of Frank Frantz carpetbagger republicanism. The rooster is a domestic bird. What evil thing is it that he has done? No farm yard is complete without a rooster and a flock of hens. The rooster is the protector and defender of the brood and scratches for all. Fit emblem of democracy. The people of Oklahoma killed this destroying eagle on Tuesday. We are tired and sick of its depredations upon us in the past. It has eaten out our substance and devoured our living, in order that men not of our own choice, should feast and fatten in official positions, while the people were ruled as with an iron rod, by officials, many of whom had no more use for our people than a hog has for hip pockets. The people have decided against this bird of evil omen and in favor of the democratic rooster, which stands for home rule and justice to all."

Entrance this time was effected the same way; by breaking a rear window, which was easily done since there were no shutters or bars. The owners of the building have steadfastly refused to pay for any fortifications of the windows.

No clue to the identity of the robbers has been discovered, but blood hounds at Tupelo have been wired for, and the merchants and the officers will make a determined effort to trail the thieves and their loot.

At 3:30 the dogs having arrived from Tupelo, followed a trail from the store to some weeds near the compass where was found the box which once contained the pistols and cutlery. From there they trailed down the Katy right of way toward Stonewall.

Election Cost \$65,000.

The election of last Tuesday cost about \$65,000, according to Charles H. Filson, territorial secretary, who bases his estimates on the cost of other elections, and this includes the printing of the ballots and other expenses. Twelve thousand election officers were employed.

A deficiency appropriation covering the expense, will be asked of congress at its coming session, and in case congress does not grant it, then the legislature of the new state will be petitioned to make it good. An attempt was made during the last congress to get a \$135,000 deficiency appropriation for the constitutional convention and this election, but the request was not granted.

Apples Preserved in Ice.

J. C. Braunbeck, of Wallis, Okla., a young country, Pennsylvania, secured a unique method of preserving apples last fall. He built a bin in the orchard seven feet wide, 14 feet long and three feet high. In the bottom of this he put straw, then filled it with apples, putting straw on the sides and ends. Then he placed straw and corn stalks on top. He dug a ditch around it to keep the water from standing there. Some water, however, found its way through the top and rotted some of the apples, but the rest were not disturbed until the ice had melted. The apples were sound, crisp and without a wrinkle.

A Substitute.

Being very close-listed Mason has never allowed himself the costly habit of smoking. He always felt himself a loser when anyone treated to cigars. But on one occasion, when the party he was with entered a stationery and cigar store, he made up his mind to have his share of the treat. "Won't you smoke this time?" asked the leader. "No, thank you," replied Mason. "but if you don't mind, I believe I'll take a pencil."—Harper's Weekly.

It's the Brogue.

"Why do we call a bandage 'bracelet'?" asked the commissioner, an Irish recruit at a recent police examination. "Faith, because it is so tended for arrist," replied the applicant. And he got the position a week.

BURGULARS MAKE SECOND VISIT.

Coffman & Owens Touched for \$175 Worth of Pistols and Knives.

For the second time in six weeks burglars broke into the hardware store of Coffman & Owens Sunday night and carried off a lot of firearms and cutlery. This time they took about 19 pistols and four dozen good knives, valued at \$175. Evidently the thieves had their bearings well, for most of the goods were taken away in a box wherein the owners had tried to conceal them. Six weeks ago in a similar way this place was touched

TWO CONTESTS PROBABLE.

Vote Very Close in Both Second and Third Congressional Districts.

Oklahoma City, Sept. 22.—There is every prospect for a contest over the Third Congressional districts, where both parties claim majorities. Ex-Governor Thomas B. Ferguson, republican candidate in the Second district, visited state headquarters Saturday and was in consultation with State Chairman Hunter. Mr. Ferguson claims to have carried nine of the fifteen counties with a total majority over Fulton (Dem.) of about 100. It is admitted at republican headquarters that the vote was close, and it is said democrats are claiming majorities which do not exist. Mr. Ferguson declares that his reduced majority is due to the success of the democratic tickets in twelve of the fifteen counties, a local sweep not anticipated. Irregularities are charged in Oklahoma, Ellis

and Harper counties. Mr. Fulton is claiming the district by more than 600 majority.

In Muskogee district a similar situation prevails. Grant Hector of Afton, I. T., who managed the republican congressional campaign there, was also at state headquarters Saturday and claims the district for F. C. Hubbard (Rep.) by approximately 500. Hubbard is alleged to have carried Muskogee, Okmulgee, Okfuskee, and Wagoner counties, but these are also claimed by the democrats.

The democratic congressional committee has not withdrawn its original estimate of Davenport's majority being about 1,000.

It is estimated here that contests probable in both districts. In connection with the Third district election fraud is alleged on the part of the republicans in Muskogee and Wagoner counties as well as other irregularities. The negro vote in both counties is said to have been heavy.

Ladies.

I am dressmaking at Reed & Harrison's store and solicit your patronage. Terms reasonable. 157-6f Mrs. Josie Pierce.

Studying is Hard on the

Most children sit improperly when they study and throw the book page into a bad habit. Those with weak eyes will suffer. Prevent this by having your child's eyes Examined Free here and get proper glasses from us if they are needed.

C. J. Warren

EXPERT OPTICIAN

DEWEY DIVED INTO DEEP WELL.

Young Namesake of the Admiral Fell 37 Feet—Unhurt.

Admiral George Dewey accomplished a wonderful deep water feat off Manila and came out unscathed. It was left for a nine year old namesake of his in Ada to also do a deep water stunt and marvelously to come forth unharned.

Dewel Earls is one of a destitute family residing on North Broadway. The family gets water from Jim Edwards' well, which is thirty-seven feet deep, about five feet in water. Dewey was sent for a pail of water.

In peeping down the hole he leaned too far, and fell in head foremost, rising to the surface he grasped the rope and was hauled out unharned. His hat was found stuck in the mud in the bottom of the well.

Back from Gotham.

A. W. and Foster Simpson returned Sunday from New York City where they have been for several weeks buying stock; the former for his surprise store, the latter for a similar store soon to be established at Kona-wa by himself and Roy Hays. Foster says Gotham got awful tiresome to him—too much noise and too many people. On the sidewalks he had to fight his way to make any progress. Hoping to escape the "mad'ing crowd," he dived into a subway car; found a seat all right, but three or four people sat on top of him. After going some fifteen miles, he emerged to the surface only to find the same mad throng. Back to the tranquil Southwest for Foster!

Negro Wasn't Satisfied.

The story is being told on one of the republican candidates while out in western Oklahoma the following conversation was overheard with a negro voter: "When is them equality laws going into effect?" asks the negro. "Why my dear fellow the equality laws are already in effect. You are as good as I am right now." "I knows dat," replied the negro, "but what I want to know is when I'se to be as good as the rest of the white folks," responded the negro.

Court of Appeals to Meet.

The court of appeals for the territory will meet at South McAlester Tuesday, possibly for the last time prior to statehood, and it is stated that an effort will be made to dispose of all cases and clear the docket. Some important decisions are expected to be handed down.

ANY SANE LEVEL HEADED MAN

OR WOMAN who will examine the Beckwith Round Oak Coal Heater can readily see why it has made its mark as the best coal heater on earth. Ada Hardware Co. 157-1f

Automobiles.

Slightly used, four cylinder touring car, good as new, completely refinished and painted. A bargain for quick sale. Also two cylinder touring car, repainted and in first-class condition. A snap.

Oklahoma Motor Car Co., 515 West Main St. Oklahoma City. 156-3f

Our White Wonder Flour.

The standard of excellence, manufactured upon the latest scientific principles from selected pure soft wheat expressly for the higher class trade, guaranteed absolutely pure and superior in quality. The greatest care is used in the manufacture of our White Wonder flour and we guarantee it to be uniform, reliable and superior to any flour made.

We guarantee every sack of our White Wonder flour to give perfect satisfaction for bread, biscuits and all kinds of pastry.

If our White Wonder flour is not found as represented we will deem it a favor to allow us to refund your money and make everything satisfactory.

FUN FOR THE BOYS.

How to Make and Shoot the Minnie Darts.

Do you like to play with a Minnie dart? Don't know what it is? Well, perhaps the picture will explain, and if you do not understand it I'll describe how to make one. Try it yourself, and you will enjoy both making and playing with it. Whittle a pine stick perfectly straight and

Making the Darts.

round, a little larger in diameter than a lead pencil. The stick should be two feet long. With a small saw cut in one end a slit about five inches deep. Into this slit insert a piece of cardboard, first cutting it the shape of Fig. 1. Tack it in place with two or three tacks. When this is done, balance the dart on your knife blade to find the center of gravity, and at the point of balance cut a notch slanting in the direction of the point away from the card end. The success of the toy, says Philadelphia Ledger, depends on balancing correctly. A piece of some springy wood is used for the lash. Cut this about three feet long and the diameter of a whip handle, tapering toward the end. To the tapering end of this stick fasten a stout string about two feet long and at the other end of the string tie a knot. To shoot the dart hold it with the left hand near to the tail, or paper, end, holding the whip in the right, just like you see the boy in the picture doing. Throw the string over the dart and draw it through the notch until it catches on the

Throwing the Darts.

knot. Then, with a rapid upward motion, switch the whip in the air, letting go to the dart at the same time. The dart will leave the string and soar high into the air.

MARY'S FISHING.

It Was All Right Until She Caught a Real Live Spider.

The other day Mary, aged four, was having a most exciting time fishing from the nursery window. She had a long string that reached to the top of a tall rose bush in the garden.

"Now I have caught a whale!" laughed she. And up she hauled a whale that weighed several tons at least, judging by the tugs and grunts that Mary gave. This monster was safely landed on the nursery floor, and the line again lowered. Next came a swordfish, which was followed by other terrible creatures that caused Mary a fresh shout of joy each time. Suddenly her mirth was changed to a horrible groan, and then a cry of blood-curdling fright. Mother ran to see what had happened.

Coming up the string—possibly to see what had become of all the sea monsters—was a pretty little black and yellow spider. Nearer and nearer it was crawling, and closer and closer, Mary held the string.

"Save me!" she sobbed. "Oh, the awful thing will eat me up!" "Let go!" laughed the mother. Mary and never once thought of that solution. The right hand relaxed, and all danger was past.

"Dear me!" said Mary later from the cozy harbor of mother's arm. "A really, truly spider is a lot worse than a make-believe alligator—why, mother, why?"

Fell but Once.

Tourist (whom Johnny is showing the sights)—I suppose people fall down this steep cliff often, don't they? Johnny—No, sir; once is enough for most of 'em.

A GOOD KITE.

Make the One You Fly and You Will Take Pride in It.

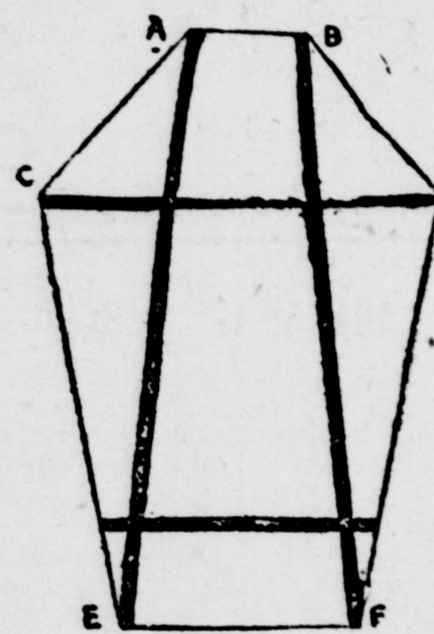

Kite-flying is one of the best outdoor amusements that a boy could have; indeed, we know a good many men that enjoy it as much as they did when they were young. The writer of this is one of them. There is a fascination about it that is not easily described. City boys have little chance to indulge in the sport, except when they go to the country or the seashore during vacation, but those that live in the suburbs, or in places where they may conveniently reach the open fields, ought all to have their kites.

Fancy designs of all kinds are sold in the shops, but if a boy wishes to have all the fun there is in the sport he ought to make his own kite. Besides, it will give him better service.

The accompanying cut shows how a good flyer may be made. Out of some straight-grained, light wood—cedar preferred—make four sticks, about one-eighth of an inch in thickness. Let two of them be 22 inches in length; one 17½ inches, and the other 13½ inches. Place them as shown in the picture, and tack them firmly where they cross. Cut little notches at the ends of the sticks, and put a string around the whole frame, making it taut and tying it so that it will not slip.

Now cut out a piece of very thin manilla paper—tissue paper would do, but thin manilla is more serviceable—one inch larger, all around, than the frame, and paste the edge over the string. Make a small hole in the end of the sticks at A, B, C, D, E, and F, and put in a string loosely from A to F, from B to E, and from C to D. Make a string loop from E to F, to which the tail of the kite is to be attached. The strings must come through to the paper side of the kite, not the stick side.

The cord by which you are to fly the kite should be attached where the strings cross each other; do this with

The Kite Frame.

a loose knot enclosing all the strings. For the tail, explains Chicago News, use a strip of muslin about one inch in width and 15 feet in length and attach ten bobs made of paper rolled up. If the kite should dive, add more tail until it sails steadily.

A TOY AIRSHIP.

You Can Make One Which Will Move Through the Air.

Make two paper cones. Close the small end of each with a cork, as shown in Fig. 1.

Thrust a needle through each of the corks. Bend the points of the needles that protrude from the corks toward the inside of the cones, so as to form hooks. Run a strong elastic from one to the other of these hooks.

Paste your cones together, joining them with a band of thin paper.

Bend the part of the needle that sticks out from one of the corks at right angles to form a sort of handle. Cut out a screw propeller like that shown in Fig. 3. Attach it, between

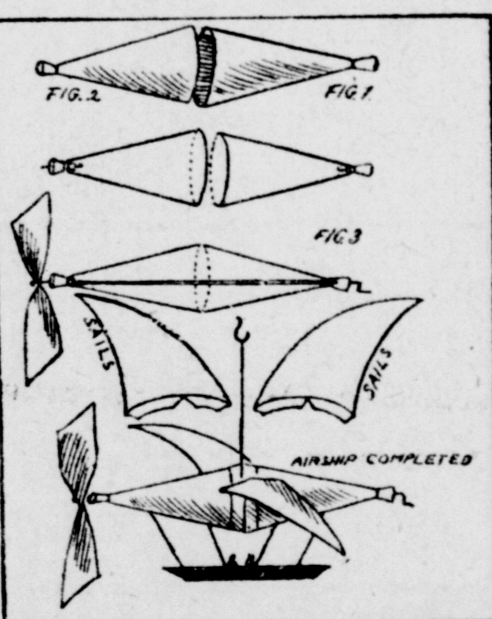

Diagram from Which to Work.

balls of wax, to the needle at the other end.

Cut out little wings and paste them at the middle of each side of the cones, so that they will serve to balance your airship in its flight.

Suspend a little "basket" to the cones by threads and your airship is complete.

To make it fly, turn the handle at one end, so that the elastic is twisted tightly. Upon releasing it, explains the Los Angeles Times, the elastic will turn the corks, causing the propeller to revolve rapidly. Your airship will continue to fly until the elastic is unwound.

Johnny's Wish.

Johnny—I wish I had a pair of goats.

Mother—What kind of goats, son?

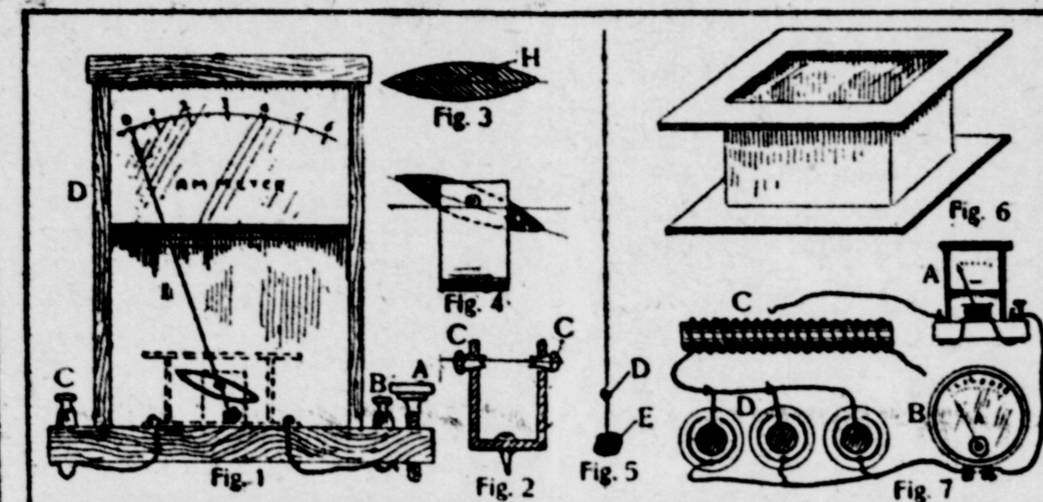

Johnny—Oh, a new kind, that look like a pair of Shetland ponies when they're hitched to my express wagon.

HOW TO MAKE AN AMMETER.

Instrument Which the Amateur Electrician Will Want.

Every amateur mechanic who performs electrical experiments will find use for an ammeter and for the benefit of those who wish to construct such an instrument the following description is given: The operative principle of this instrument is the same as that of a galvanometer, except that its working position is not confined to the magnetic meridian. This is accomplished by making the needle revolve in a vertical instead of a horizontal plane. The only adjustment necessary is that of leveling, which is accomplished by turning the

Complete Ammeter and Details.

thumb screw shown at A, Fig. 1, until the hand points to 0 on the scale.

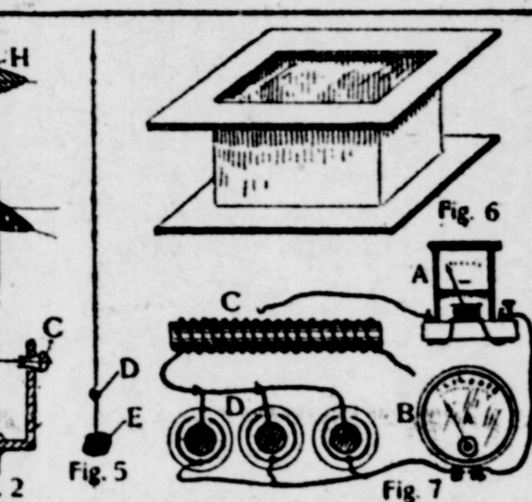

First make a support, Fig. 2, by bending a piece of sheet brass to the shape indicated and tapping for the screws, C, C. These should have hollow ends, as shown, for the purpose of receiving the pivoted axle which supports the hand. The core, Fig. 3, is made of iron. It is one inch long, one-quarter inch wide and one-eighth inch thick. At a point a little above the center, drill a hole as shown at H and through this hole drive a piece of knitting needle about one-half inch long, or long enough to reach between the two screws shown in Fig. 2. The ends of this small axle should be ground pointed and should turn easily in the cavities, as the sensitivity of the instrument depends on the ease with which this axle turns.

After assembling the core as shown in Fig. 4, it should be filed a little at one end until it assumes the position indicated. The pointer or hand, Fig. 5, is made of wire, aluminum being preferable for this purpose, although copper or steel will do. Make the wire four and one-half inches long and make a loop, D, one-half inch

from the lower end. Solder to the short end a piece of brass, E, of such weight that it will exactly balance the weight of the hand. This is slipped on the pivot and the whole thing is again placed in position in the support. If the pointer is correctly balanced it should take the position shown in Fig. 1, but if it is not exactly right a little filing will bring it near enough so that it may be corrected by the adjusting screw.

Next make a brass frame as shown in Fig. 6. This might be made of wood, although brass is better, as the eddy currents set up in a conductor surrounding a magnet tend to stop oscillation of the magnet. (The core is magnetized when a current flows through the instrument.) The brass frame is wound with magnet wire, the size depending on the number of amperes to be measured. Mine is wound with two layers of No. 14 wire, ten turns to each layer, and is about right for ordinary experiment purposes. The ends of the wire are fastened to the binding-posts, B, C, Fig. 1.

A wooden box, D, is then made and provided with a glass front. A piece of paper is pasted on a piece of

wood, which is then fastened in the box in such a position that the hand or pointer will lie close to the paper scale. The box is five and one-half inches high, four inches wide and one and three-quarter inches deep; inside measurements. After everything is assembled put a drop of solder on the loop at D, Fig. 5, to prevent it turning on the axle.

To calibrate the instrument connect as shown in Fig. 7, where A is the home-made ammeter; B, a standard ammeter; C, a variable resistance and D a battery, consisting of three or more cells connected in multiple. Throw in enough resistance to make the standard instrument read one ohm and then put a mark on the paper scale of the instrument to be calibrated. Continue in this way with two amperes, three amperes, four amperes, etc., until the scale is full. To make a voltmeter out of this instrument, further explains Popular Mechanics, wind with plenty of No. 36 magnet wire instead of No. 14, or if it is desired to make an instrument for measuring both volts and amperes, use both windings and connect to two pairs of binding-posts.

ARE OUT OF THE WAY.

System of Subways for City Pipes and Wires.

European cities are making great headway in the construction of subways beneath the streets to contain not only electric wires for light, power and communication, but also for the gas and water pipes. In London a subway for these utilities is now built whenever a new street is authorized. Some of the London subways are as large as seven feet high by 12 feet wide; there are already seven miles of these pipe subways.

In Manchester the subway has now reached a length of 7,386 feet, and is used exclusively for electric wires, which are contained in pipes carried on iron buckets fastened to the walls. The cost was \$39 per linear foot. Other cities where the system has been built are Leeds, Nottingham and St. Helens. The construction is paid for by the city, which charges an annual rental from the service companies, which more than pays the interest on the cost. These annual charges are based on the diameter of the pipe, ranging from 60 cents for three-inch diameter or less up to \$12.50 for 36-inch per foot for water or gas. For other companies the rate is much higher, being \$6.50 for three-inch pipes and \$20 for 18-inch per 300 feet. The freedom from leaks in water and gas mains, and the ease and economy with which repairs can

Manchester Subway.

be made make the proposition an interesting one to the tenant companies.

Our American cities should take up the pipe subway question, declares Popular Mechanics, and not only provide a revenue producing power for all time to come, but save the everlasting tearing up of the streets.

SINGING ELECTRIC ARC.

Is Made Vocal by Connection with the Microphone.

It has been known for some time that the electric arc could be made vocal if attached to a microphone. The discovery was made by M. Simon and was developed by Auhmer. Fur-

Ten Thousand Electric Sparks Per Second.

The experiment here illustrated was made by an Italian scientist, Signor Majorana, in explanation of M. Poulsen's invention. Each of the sparks was quite independent.

ther improvements were made by M. Poulsen, who lately explained his instrument at the Queen's hall, London. At the children's lectures at the Royal Institution the lecturer, Mr. Duddell, who had independently discovered and made practicable this property of the electric arc, showed his small audience how it might be used as a telephone. His assistant, Mr. Turbini, went into another room taking with him a microphone—an ordinary transmitter—attached to the arc lamp by a flexible wire. He then whistled into the microphone an operatic selection, and the tones emerged from the arc lamp and were distributed over the theater.

Vacuum and Insulation.

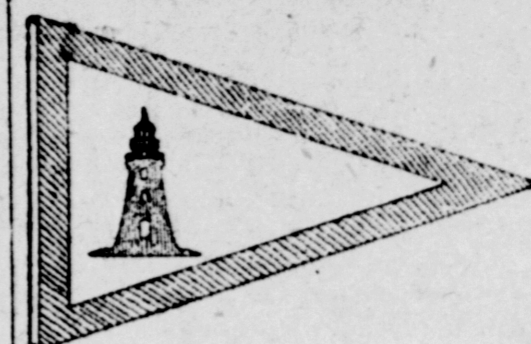

The remarkable heat-insulating effect of a vacuum is strikingly brought out in the claims made for a new sportsman's bottle. The vessel has double walls, being really one bottle within another, with a sealed-up intervening space from which the air has been withdrawn. It is asserted that liquids in this bottle can be kept hot 48 hours in the coldest weather, and that food beverages will retain their deliciousness for weeks in the hottest summer.

LIGHTHOUSE NAVY

A FLEET OF BOATS WHICH NEVER FIRES A GUN.

Pacific, But Tremendously Important, Mission Which One Hundred and Twenty-Two of Uncle Sam's Ships Perform.

For years the United States has been climbing up as a naval power,

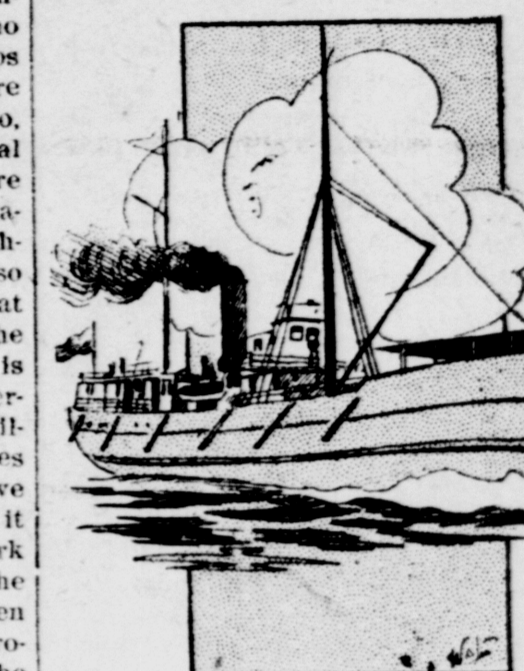

Ensign of the Lighthouse Fleet.

and now is credited as standing second in the list of the nations whose sea-fighting strength places them in the forefront of the world powers, and nearly every American is familiar with the long list of names of the warships, together with their fighting equipment, but probably there are but few who know that Uncle Sam maintains another navy which boasts of no engines of death. In all the 122 ships in commission under its flag there is not a single cannon, not a torpedo, not a machine gun or rifle to deal death to an enemy. The ships are built without turrets, powder magazines or fighting tops, and the sheathing of steel upon their hulls is so thin that a bullet from a boy's cat rifle could almost bore through the wood underneath. But weak as it is no bullying pirate would be desperate enough to give battle to its sailors; no enemy of the Stars and Stripes will ever sink its ships. It is, above all others, the navy of peace, for it is the lighthouse navy, and its work is for all mankind. Without it the fighting navies of the world when near shore could never turn a propeller after dark, the commerce of the nation would be crippled if not annihilated, and passenger steamers, mail boats and pleasure craft would be at the mercy of the waves and reefs as soon as the sun was obscured in the heavens by the fall of night or the swoop of storm. Without its navy the warning beacons maintained by the lighthouse board would go out on a thousand dangerous coasts and treacherous lakes and river shores. Navigation would be standing still part of the time, and human knowledge would shrink and shrivel to the proportions that measured it before the peoples of the earth were able to visit one another across the seas that separate their homes.

The principal ships of the light-

house establishment are, of course, the lightships, which are moored at various points dangerous to navigation along the ocean coast. But there are scores of other vessels, like the steam tenders, which are employed in delivering to the keepers of the lights such supplies of food, fuel and clothing as they need, and the smaller craft that the keepers, their families and employes use.

Lightships of the first class—93 in number, including those now building—are fine seagoing vessels averaging 350 tons measurement, that are provided with lights, bells and fog whistles. Smaller lightships are maintained on the lakes and rivers. The oceangoing lightships cost in the neighborhood of \$80,000 each; those in use on the lakes and rivers a little less. Of the vessels on the Atlantic coast the older and smaller wooden ships are stationed in the bays, gulfs, sounds and similar sheltered waters. Some of these, obsolescent as they are, cost the government as much as \$50,000 each. The latest improved models have steel hulls. The lightship at Sandy Hook has a revolving lens light, the first ever used on a lightship in this or any other country. Another lightship, at Cornfield Point, Long Island, was the first elec-

Lighthouse Tender Hyacinth on Lake Michigan.

tric lighted vessel of its kind to be built anywhere. The Sandy Hook lightship costs about \$9,000 a year to maintain. Owing to its immense consumption of fuel, the Cornfield Point ship costs more than \$1,000 a year to keep running. The lights of one of these ships will burn more than 1,000 gallons of oil a year. To keep the fog whistle of a lightship sounding its warning requires the expenditure of a ton of coal a day, so one can imagine that to maintain this navy of peace is in its way a luxurious necessity that only a nation with an ample pocketbook could afford.

THE OLD BRIDGE.

ONE IMMORTALIZED BY LONG FELLOW REPLACED BY NEW.

Massive Granite Structure at Cambridge Which Takes the Place of One on Which the Poet Stood at Midnight.

Could the spirit of Longfellow return it perhaps would be disquieted by the disappearance of the old bridge where the poet loved to linger in the still hours of the night and watch the

One of the Towers of the New Bridge.

ebb and flow of the tide and listen to the rippling of the waters, for the old structure which was immortalized in the poem has given place to a modern structure of massive granite which has just been dedicated by the people of Cambridge, Mass. The new bridge, with its towers and abutments, its arches and its piers, bears little resemblance to the historic old West Boston bridge, whose place it takes.

It was seven years ago, almost to a day, that the first stroke of work was done which was to yield the best bridge in Massachusetts.

The new bridge, while not so long as Harvard bridge by some 200 feet, is of greater massiveness and solidity. The length over all, including the approaches, is 3,700 feet; subtracting the space taken up by the approaches, the length of the bridge proper is 1,800 feet, and its width 105 feet. The arch of the bridge is divided into 11 spans, varying in length. The large center span, through span, which is 188.5 feet long, down to those on each end, which are 101.5 feet in length. The large center span, through which all vessels pass, has a headway of 26 feet at high tide for a space 50 feet in width, thus allowing tugs, barges and vessels with "telescope" masts to pass through easily.

The center span, with its four massive towers of granite, is a new departure in bridge building, and like all new things, these towers have been freely criticized from an architectural standpoint. The bridge is, however, as Mr. Jackson, the engineer, puts it, an "engineer's bridge."

Each of the granite centerpieces is elaborately carved. On the Boston side is the city seal on both inner and outer face, while the seal of Cambridge is carved on the faces of the Cambridge side of the center span.

The two stone abutments are hollow, a construction which greatly lessens the weight of the structure. In fact, from end to end the bridge has been built with a view above all to strength and durability, as far as this did not detract from architectural standards. The cost of the bridge amounted to a little over \$2,500,000.

The old West Boston bridge, which was torn down to be replaced by the new one, was a landmark of considerable historical interest. In the latter part of the eighteenth century a company was incorporated, which, on March 9, 1792, was empowered by an act approved by John Hancock to build a bridge from Boston at a point near the pesthouse, so-called, to Pelham's Island, Cambridge. The bridge was begun in the summer of 1792, and on Nov. 23, 1793, was opened for traffic. The structure was wooden, 46 feet in width—"a plank bridge on pine piles, which were soon destroyed by worms, and were replaced by oak as fast as was consistent with economy and prudence."

The cost was \$23,000, paid for by tolls, which were collected for 40 years.

REMEMBER THE HOME

In laying out plans for the fall and winter don't overlook the home. My easy payment plan will enable you to furnish it and not miss the money. If you need anything in my line come in and talk it over with me.

This solid oak suit, consisting of three pieces, a Dresser, Bed and Washstand, at \$20. Pay me \$4 and \$2 per week.

Let us fix you up a bed with a mattress and spring that will make sleep comfortable and give you a night's rest.

Remember it is my business to please and give my customers satisfaction, and that is what we guarantee to do, both in the quality of the goods, the price and the terms, and you now have our entire line of goods to select from.

Accordingly we again invite you to visit us if you should need anything in the line of furniture or undertaking.

IRON TEETH IN JURY CHARGE

**Judge Dickerson Enjoins Grand Jury
to Indict for Liquor Offenses if Bev-
erage Contains Least Bit of Alcohol
or of Malt.—U. S. Court Formally
Convened.**

"If one sells liquor containing any alcohol whatever, or any malt, what-
ever be the name under which it is
sold, it is your duty when the facts are
brought before you, to indict that
man." These words from Judge Dick-
erson in his charge to the grand jury
constituted the most sensational fea-
ture of the opening day of U. S. court.

"There is no such thing as the so-
called 'Territorial drinks,' continued
he, 'the Territory court of appeals has
decided clearly that any drink is un-
lawful however small be the percent
of alcohol or of malt. That is the
law.' The judge in his charge gave
particular emphasis to violations of
the liquor law, saying in that connec-
tion: 'If any of you grand jurors
need any bracing up of the backbone,
you should find it in the results of the
recent election on the prohibition is-
sue, which show this community as
well as nearly every other commu-
nity in the territories, wants laws
against liquor and wants them en-
forced. No longer can be urged the
old argument for leniency and loose-
ness, that 'the people do not want the
harsh laws against the liquor traffic
enforced.'"

In addition the court made special
mention, as required by law, of gam-
bling and the grand juries were im-
paneled, and directly after noon he
delivered his charge to the latter,
whereupon he proceeded to sound the
civil docket to ascertain how many
cases were ready for trial.

The following representative citi-
zens of Pontotoc county constitute the
grand jury:

J. C. Cates, foreman, R. E. Haynes,
J. A. Biles, J. F. M. Harris, H. C.
Russell, T. Spencer, H. A. Hodges,
C. M. McClain, N. B. Butler, Price
Stallier, W. P. Chism, J. S. Gish, Jno.
McKoy, M. M. Saunders, J. H. Hilburn,
W. W. Burkhart.

These fifteen were sworn in as peti-
ty jurors and fifteen more talesmen
were ordered summoned:

Vic Florence, W. L. Jones, P. M.
Jinks, R. W. Rhea, W. H. Nettles, R.
W. Campbell, G. W. Lowrey, Cole
Emory, W. H. Ryan, John Murphy, J.
W. Salter, J. M. Sawyers, Geo. Garrett,
J. R. Allen, Wiley Hunt.

The genial Colonel Tom Smith is at
his post as court crier; Miss Alma
Harrison, from Chickasha, is the court
stenographer this term; Judges Alex-
ander Gullet and Eugene Hamilton
represent the government in the prose-
cutions and before the grand jury.

and we are sure that we will be
able to please you.

COX-GREER McDONALD CO.

ling, carrying weapons and disturbance
of public worship. Also he enjoined
the grand jury to investigate the of-
fense of dealing in futures, "an offense
productive of evil just as any other
gambling is; one not only demoral-
izing to those who indulge, but also
to the farmers by reason of its build-
ing up fictitious markets." Intimating
that he had been informed that within
this district recently there had
been municipal officers winking at
lawlessness, the judge charged the
jury to make thorough investigations.

Judge J. T. Dickerson arrived from
Chickasha at eleven a. m. and imme-
diately convened court for the three days
week commencing at Ada. Before noon the
U. S. Marshal Ed Brents and a corps of
bailiffs are waiting upon the court
and grand jury.

GOEBEL'S ASSASSINATION.

Woman's Strange Story—Accuses
Mountaineer of Crime.

Richmond, Ind., Sept. 22.—Turner
Igo of Farmers, Rowan county, Ky.,
is charged with killing Governor Wil-
liam Goebel of Kentucky in an at-
tempt by Mrs. Lula Clark, which was
published by the Richmond (Ind.)
Daily News for the three days
week commencing at Ada. Before noon the
Mrs. Clark's affidavit was taken at

I. HARRIS
Clothier and Gents Furnisher

Indianapolis on April 11, 1907, in the
law office of former Gov. W. S. Taylor
of Kentucky. She is a niece of Frank
Day of Franchburg, Ky., and also of
James Williams of the same place.
She has a cousin named Gertrude King
who lived at Maysville at the time of
the killing of Goebel. Miss King at
that time was keeping company with
John Stanford of Covington, Ky.

Upon the day Goebel was slain the
two girls went to Frankfort, Ky. They
started to enter the state house by a
rear entrance and when on the steps
a shot was fired. At the same time
they noticed a man standing just out-
side the door whom they recognized as
Stanford.

In a minute the second man came
running out of the building dressed
like a mountaineer and carried a rifle.
He ran to Sanford and said I got the
— That man was recognized by the
affiant as her friend, Turner Igo of
Farmers, Rowan county, Ky.

Both men ran out of the building to
a fence where Sanford gave a pair of
shoes which he was carrying to Igo,
who exchanged his boots for them.
The man then disappeared.

Affiant states that Igo told her at
Mount Sterling on Jan. 25, 1900, that
he was going to kill Goebel, and she
saw him afterward at Jeffersonville,

Ind., and he reminded her he had ful-
filled his promise.

She also says Sanford told Gertrude
King a few days prior to Goebel's mur-
der that he intended killing Goebel,
saying, "here is my chance to get re-
venge, the legislature has met."

New Line to the Gulf.

Guthrie, Okla., Sept. 21.—A charter
has been granted to the Wichita, Cleve-
land & Gulf railway, with headquar-
ters at Cleveland, Okla., and \$50,000-
000 capital stock, to build 634 miles
from Wichita, Kansas, through the
counties of Sedgwick, Butler, Cowley
and Chautauque, in Kansas, the coun-
ties of Pawnee and Osage in Oklaho-
ma, the Cherokee, Creek and Choctaw
Nations, and the states of Arkansas,
Texas and Louisiana, to the gulf. The
incorporators include David Ratner, J.
F. Feathering, J. C. Byers, R. L.
Lunsford and A. Cecanko.

Mrs. Bond Passes Away.

Mrs. J. M. Bond, after lingering with
slow fever several weeks, began sink-
ing rapidly Sunday, and in spite of all
efforts to revive her, passed away Mon-
day morning at 6 o'clock. The re-
mains were shipped to Madill for in-
terment.

Ada Evening News

OTIS B. WEAVER, Editor and Owner
HOWARD PARKER, Associate Editor

Entered second-class mail matter March 28, 1904, at the post office at Ada, Indian Territory under the Act of Congress March 3, 1879.

THE PRESIDENT AND THE OKLAHOMA CONSTITUTION.

The Oklahoma constitution, under the provisions of the enabling act, which permitted a vote on the question of statehood, must be endorsed by the president before the new state can be admitted to the Union. It is possible that the president will reject the constitution and therefore deny statehood to the two territories; but it is certain that some higher motive will prompt such executive action than the mere fact that Oklahoma elected a democratic state ticket and sent three or four democrats to congress in the election last Tuesday.

The Oklahoma republicans who assume that the constitution will not receive endorsement at the White House because it would admit a democratic state to the Union are making themselves ridiculous in the eyes of the country. The president's duty is a judicial one. The limitations of his powers in the acceptance or rejection of the instrument are limited to two distinct propositions—a determination of the constitution's compliance with the enabling act passed by congress, and the harmony of its provisions with the federal constitution.

Secretary Taft in his speech in Oklahoma City made the president's position clear. For this reason he warned the voters against the defects in their constitution as they affected the citizens of the state. These defects may be apparent to the president and yet prove no bar to his approval of the document as a whole.

Statehood is not to be denied Oklahoma for political reasons. The defeated politicians who take comfort in that assumption will be doomed to disappointment. If they can present no more tangible excuse for the rejection of the constitution than that the state gave a democratic majority or that the beer interests are displeased with the adoption of prohibition, Oklahoma is certain to realize its hopes for immediate statehood—Kansas City Star.

ROUGH RIDERS IN VALDIVILLE.

Governor Frank Frantz and Colonel Charles Hunter, chairman of the republican state committee, are presenting to the people of the new state a novel spectacle, a kind of rough rider vaudeville act.

Though every man, woman and child in Oklahoma and Indian Territory knows that the democrats have carried the constitution, the state officers and the legislature by overwhelming majorities these two individuals surlily declare it is not so, that there has been fraud in the election and that they will continue their fight against statehood.

They do not say they are fighting statehood, but no one doubts that to be their meaning.

These leaders of a forlorn hope in the recent campaign practically asked the people of these two territories to nullify themselves in the eyes of the nation by voting down the best constitution ever written and defeating statehood after the people had been laboring for statehood for many years.

But the people repudiated these men by an overwhelming vote making such a clean sweep in the election that there is left no room for doubt as to the results.

And yet these worthies have the audacity to appeal before the people and deny that the democrats have won by a landslide, and they dramatically raise the cry of fraud in the election.

So undignified and puerile is their conduct that it merely arouses the risibilities of their neighbors and make them the laughing stock of the powers that be at Washington if they carry their troubles to the national capital.

After all, however, it is really pitiable, and some of their good friends will do them a kindness by drawing the curtain.

It is the end of the last act in that monotonous and trying play, "The Carpetbagger"—Oklahoman.

Judge Dickerson's charge to the grand jury today was all that a clean citizen could ask. He told them not to spare any violator of law, whether he be high or low.

Shawnee Man for Speaker.

Shawnee, Sept. 23.—Milton Bryan, a Shawnee attorney, elected on the democratic ticket to the state legislature, has announced his candidacy for speaker of the house. He served as a member of the last Territorial legislature of Oklahoma and has received the commendations of several successful candidates of their support.

Today's Cotton Market.

Futures dropped \$2 a bale in New Orleans, \$1.75 in New York.
New Orleans spots down 1/4 of a cent—11 1/2. New York spots down 20 points—11.90.

WAS A GREAT RALLY AT ROFF

Amid Great Enthusiasm Democrats of Pontotoc County Ratify Results of the Recent Election.—Jubilate Till Midnight Hour.

It was a roaring big ratification of the election, that jubilee held by the democrats at Roff Saturday night.

The crowd was not so representative of the whole county as desired, because there was not sufficient time to advertise the event well in the country districts, and Ada democrats were unable to secure the special train hoped for. But everybody in Roff was on hand and they made a crowd by themselves. Besides there were a number present from Ada and other places.

The meeting continued in full swing till midnight. Anvils boomed forth, orators smote the air with their eloquence, and the assembled hundreds shouted their jubilation.

Among the speakers of the evening were Delegate Franklin of Madill, Tom Smith and Rev. Hicks of Roff, Henry M. Furman, Roff, Wimbish, R. M. Koddie, and Geo. Thompson of Ada.

The crowd applauded tremendously when Judge Furman, in the following words drew the contrast between the republican eagle and the democratic rooster:

"The principles and practices of the republican and democratic parties are fully illustrated by their emblems. The emblem of the republican party is the

eagle. The emblem of the democratic party is a rooster. Our republican friends claim that the eagle is a noble bird. But I ask you what noble thing has the eagle ever done. Is it not true that the eagle lives by killing and devouring weaker birds and animals? Is it not true that the eagle is a bird of evil omen and of prey? My friends, the eagle is a highwayman, a pirate, a buccaner and murderer and a thief. Fit emblem of Frank Frantz carpetbag republicanism. The rooster is a domestic bird. What evil thing is it that he has done? No farm yard is complete without a rooster and a flock of hens. The rooster is the protector and defender of the brood and scratches for all. Fit emblem of democracy. The people of Oklahoma killed this destroying eagle on Tuesday. We are tired and sick of its depredations upon us in the past. It has eaten out our substance and devoured our living, in order that men not of our own choice, should feast and fatten in official positions, while the people were ruled as with an iron rod, by officials, many of whom had no more use for our people than a hog has for his pockets. The people have decided against this bird of evil omen and in favor of the democratic rooster, which stands for home rule and justice to all."

NOT TILL DECEMBER, MAYBE.

Will Probably Take That Long for Statehood to Reach Proclamation Stage.

Guthrie, Sept. 23.—As the constitution and statewide prohibition have been adopted and state officers chosen the election ordinance, as drawn by the constitutional convention, provides that the state canvassing board must begin its work on October 3. The enabling act requires this board shall be Chief Justice Buford of Oklahoma, Chief Justice Clayton of Indian Territory and Territorial Secretary Ellison of Oklahoma, and following the completion of their work, then that the two judges named, together with Governor Frank Frantz, shall certify the results to President Roosevelt, together with the statement of the votes cast and a copy of the constitution and all ordinances.

No time limit is set when these matters must be certified to President Roosevelt, but the president must act within twenty days after receiving the constitution. In all probability the constitution will not reach President Roosevelt before November 15, especially if the contention is upheld that the board must prepare a certified copy of the original of the constitution and forward it to the president. This would give the president until December 5 to pass upon the constitution.

The contention is made by Assistant Attorney General Bonaparte at Washington, that under the federal constitution, congress exceeded its authority when it delegated its power to admit states to President Roosevelt, as the federal constitution expressly provides that congress alone can admit states into the union. Elkins maintains that the question of admittance comes when the United States senators and congressmen from Oklahoma shall present their certificates of election, and the query is put on the floor of the house, shall they be seated? It is believed by Elkins that Attorney General Bonaparte will advise President Roosevelt that congress and not he can admit the new state, and that under such conditions Roosevelt will refer the constitution to congress. Governor Frantz leaves this week to join President Roosevelt at Kookuk, Ia., to accompany him on the Mississippi river trip. He will be with the president a week and the Oklahoma constitution will be discussed and its fate probably determined.

BURGULARS MAKE SECOND VISIT.

Coffman & Owens Touched for \$175 Worth of Pistols and Knives.
For the second time in six weeks burglars broke into the hardware store of Coffman & Owens Sunday night and carried off a lot of firearms and cutlery. This time they took about 19 pistols and four dozen good knives, valued at \$175. Evidently the thieves had their bearings well, for most of the goods were taken away in a box wherein the owners had tried to conceal them. Six weeks ago in a similar way this firm was touched

for \$235 worth of guns and knives. Entrance this time was effected the same way: by breaking a rear window, which was easily done since there were no shutters or bars. The owners of the building have steadfastly refused to pay for any fortifications of the windows.

No clue to the identity of the robbers has been discovered, but blood hounds at Tupelo have been wired for, and the merchants and the officers will make a determined effort to trail the thieves and their loot.

At 3:30 the dogs having arrived from Tupelo, followed a trail from the store to some weeds near the compass where was found the box which once contained the pistols and cutlery. From there they trailed down the Katy right of way toward Stonewall.

Election Cost \$65,000.

The election of last Tuesday cost about \$65,000, according to Charles H. Elson, territorial secretary, who bases his estimates on the cost of other elections, and this includes the printing of the ballots and other expenses. Twelve thousand election officers were employed.

A deficiency appropriation covering the expense, will be asked of congress at its coming session, and in case congress does not grant it, then the legislature of the new state will be petitioned to make it good. An attempt was made during the last congress to get a \$135,000 deficiency appropriation for the constitutional convention and this election, but the request was not granted.

Apples Preserved in Ice.
J. C. Braden, of Wallis, Ark., is a young man from Indiana, who has a unique method of preserving his apples last fall. He built a bin in the cellar seven feet wide, 14 feet long and three feet high. In the bottom of this he put sawdust, then filled it with apples, putting straw on the sides and ends. Then he placed straw and corn stalks on top, and a brick around it to keep the water from standing there. Some water, however, found its way through the top and soaked the apples, but the apples were sound and without a wrinkle.

A Substitute.

Being very dissatisfied Mason, has never allowed himself the costly habit of smoking. He always felt himself a loser when anyone treated to cigars. But on one occasion, when the party he was with entered a stationery and cigar store, he made up his mind to have his share of the treat. "Won't you smoke this time?" asked the leader. "No, thank you," replied Mason. "But if you don't mind, I believe I'll take a pencil."—Harper's Weekly.

It's the Breeze.

"Why do we call a handkerchief 'bracket'?" asked the commissioner, an Irish recruit at a recent police examination. "Faith, because it is in tended for arrest," replied the applicant. "And he got the position, a sec."

TWO CONTESTS PROBABLE.

Vote Very Close in Both Second and Third Congressional Districts.

Oklahoma City, Sept. 23.—There is every prospect for a contest over the Third Congressional districts, where both parties claim majorities. Ex-Governor Thomas B. Ferguson, republican candidate in the Second district, visited state headquarters Saturday and was in consultation with State Chairman Hunter. Mr. Ferguson claims to have carried nine of the fifteen counties with a total majority over Fulton (Dem.) of about 100. It is admitted at republican headquarters that the vote was close, and it is said democrats are claiming majorities which do not exist. Mr. Ferguson declares that his reduced majority is due to the success of the democratic tickets in twelve of the fifteen counties, a local sweep not anticipated. Irregularities are charged in Oklahoma, Ellis

and Harper counties. Mr. Fulton is claiming the district by more than 600 majority.

In Muskogee district a similar situation prevails. Grant Hector of Atton, I. T., who managed the republican congressional campaign there, was also at state headquarters Saturday and claims the district for F. C. Hubbard (Rep.) by approximately 500. Hubbard is alleged to have carried Muskogee, Okmulgee, Okfuskee, and Wagoner counties, but these are also claimed by the democrats.

The democratic congressional committee has not withdrawn its original estimate of Davenport's majority being about 1,000.

It is estimated here that contests probable in both districts, in connection with the Third district election fraud is alleged on the part of the republicans in Muskogee and Wagoner counties as well as other irregularities. The negro vote in both counties is said to have been heavy.

DEWEY DIVED INTO DEEP WELL.

Young Namesake of the Admiral Fell 27 Feet—Unhurt.

Admiral George Dewey accomplished a wonderful deep water feat off Manila and came out unscathed It was left for a nine year old namesake of his in Ada to also do a deep water stunt and marvelously to come forth unharmed.

Dewey Earls is one of a destitute family residing on North Broadway. The family gets water from Jim Edwards well, which is thirty-seven feet deep, about five feet in water Dewey was sent for a pail of water. In peeping down the hole he leaned too far, and fell in head foremost, rising to the surface he grasped the rope and was hauled out unharmed. His hat was found stuck in the mud in the bottom of the well

Back from Gotham.

A W and Foster Simpson returned Sunday from New York City where they have been for several weeks buying stock the former for his surprise store, the latter for a similar store soon to be established at Konawa by himself and Roy Hays Foster says Gotham got awful tiresome to him—too much noise and too many people On the sidewalks he had to fight his way to make any progress Hoping to escape the madding crowd, he dived into a subway car, found a seat all right, but three or four people sat on top of him After going some fifteen miles he emerged to the surface only to find the same mad throng Back to the tranquil Southwest for Foster!

Negro Wasn't Satisfied.

The story is being told on one of the republican candidates while out in western Oklahoma the following conversation was overheard with a negro voter When is them equality laws going into effect? asks the negro Why my dear fellow the equality laws are already in effect. You are as good as I am right now I knows dat, replied the negro, but what I want to know is when Ise to be as good as the rest of the white folks, responded the negro

Court of Appeals to Meet.

YOUTH'S DEPARTMENT

FUN FOR THE BOYS.

How to Make and Shoot the Minnie Darts.

Do you like to play with a Minnie dart? "Don't know what it is?" Well, perhaps the picture will explain, and if you do not understand it I'll describe how to make one. Try it yourself, and you will enjoy both making and playing with it. Whittle a good stick perfectly straight and

Making the Darts.

round, a little larger in diameter than a lead pencil. The stick should be two feet long. With a small saw cut in one end a slit about five inches deep. Into this slit insert a piece of cardboard, first cutting it the shape of Fig. 1. Tack it in place with two or three tacks. When this is done, balance the dart on your knife blade to find the center of gravity, and at the point of balance cut a notch slanting in the direction of the point away from the card end. The success of the toy, says Philadelphia Ledger, depends on balancing correctly. A piece of some springy wood is used for the leaf. Cut this about three feet long and the diameter of a whip handle, tapering toward the end. To the tapering end of this stick fasten a stout string about two feet long and at the other end of the string tie a knot. To shoot the dart hold it with the left hand near to the tail, or paper, end, holding the whip in the right, just like you see the boy in the picture doing. Throw the string over the dart and draw it through the notch until it catches on the

Throwing the Darts.

knot. Then, with a rapid upward motion, switch the whip in the air, letting go to the dart at the same time. The dart will leave the string and soar high into the air.

MARY'S FISHING.

It Was All Right Until She Caught a Real Live Spider.

The other day Mary, aged four, was having a most exciting time fishing from the nursery window. She had a long string that reached to the top of a tall rose bush in the garden. "Now I have caught a whale!" laughed she. And up she hauled a whale that weighed several tons at least, judging by the tugs and grunts that Mary gave. This monster was safely landed on the nursery floor, and the line again lowered. Next came a swordfish, which was followed by other terrible creatures that caused Mary a fresh shout of joy each time. Suddenly her mirth was changed to a horrible groan, and then a cry of blood-curdling fright. Mother ran to see what had happened.

Coming up, the string—possibly to see what had become of all the sea monsters—was a pretty little black and yellow spider. Nearer and nearer it was crawling, and closer and closer, Mary held the string.

"Save me!" she sobbed. "Oh, the awful thing will eat me up!" "Let go!" laughed the mother. Mary and never once thought of that solution. The right hand relaxed, and all danger was past.

"Dear me!" said Mary later from the nursery harbor of mother's arm. "A really, truly spider is a lot worse than a make-believe alligator—why, mother, why?"

Fell but Once.

Tourist (whom Johnny is showing the night)—I suppose people fall down this steep cliff often, don't they? Johnny—No, sir; once is enough for most of 'em.

A GOOD KITE.

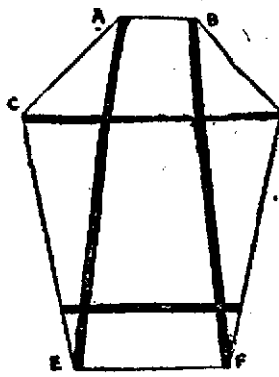

Make the One You Fly and You Will Take Pride in It.

Kite-flying is one of the best outdoor amusements that a boy could have. Indeed, we know a good many men that enjoy it as much as they did when they were young. The writer of this is one of them. There is a fascination about it that is not easily described. City boys have little chance to indulge in the sport, except when they go to the country or the seashore during vacation, but those that live in the suburbs, or in places where they may conveniently reach the open fields, ought all to have their kites.

Fancy designs of all kinds are sold in the shops, but if a boy wishes to have all the fun there is in the sport, he ought to make his own kite. He will find it will give him better service. The accompanying cut shows how a good flyer may be made. Out of some straight-grained, light wood—cedar preferred—make four sticks, about one-eighth of an inch in thickness. Let two of them be 23 inches in length; one 17½ inches, and the other 13½ inches. Place them as shown in the picture, and tack them firmly where they cross. Cut little notches at the ends of the sticks, and put a string around the whole frame, making it taut and tying it so that it will not slip.

Now cut out a piece of very thin manila paper—tissue paper would do, but thin manila is more serviceable—one inch larger, all around, than the frame, and paste the edge over the string. Make a small hole in the end of the sticks at A, B, C, D, E, and F, and put in a string loosely from A to F, from B to E, and from C to D. Make a string loop from E to F, to which the tail of the kite is to be attached. The strings must come through to the paper side of the kite, not the stick side.

The cord by which you are to fly the kite should be attached where the strings cross each other; do this with

The Kite Frame.

a loose knot enclosing all the strings. For the tail, explains Chicago News, use a strip of muslin about one inch in width and 15 feet in length and attach ten bobs made of paper rolled up. If the kite should dive, add more tail until it sails steadily.

A TOY AIRSHIP.

You Can Make One Which Will Move Through the Air.

Make two paper cones. Close the small end of each with a cork, as shown in Fig. 1.

Thrust a needle through each of the corks. Bend the points of the needles that protrude from the corks toward the inside of the cones, so as to form hooks. Run a strong elastic from one to the other of these hooks.

Paste your cones together, joining them with a band of thin paper.

Bend the part of the needle that sticks out from one of the corks at right angles to form a sort of handle. Cut out a screw propeller like that shown in Fig. 3. Attach it, between

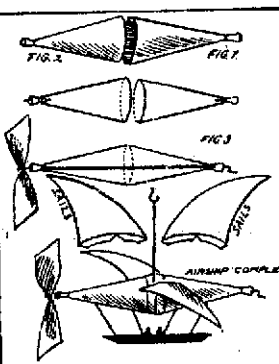

Diagram from Which to Work.

balls of wax, to the needle at the other end.

Cut out little wings and paste them at the middle of each side of the cones, so that they will serve to balance your airship in its flight.

Suspend a little "basket" to the cones by threads and your airship is complete.

To make it fly, turn the handle at one end, so that the elastic is twisted tightly. Upon releasing it, explains the Los Angeles Times, the elastic will turn the corks causing the propeller to revolve rapidly. Your airship will continue to fly until the elastic is unwound.

Johnny's Wish.

Johnny—I wish I had a pair of goats.

Mother—What kind of goats, son?

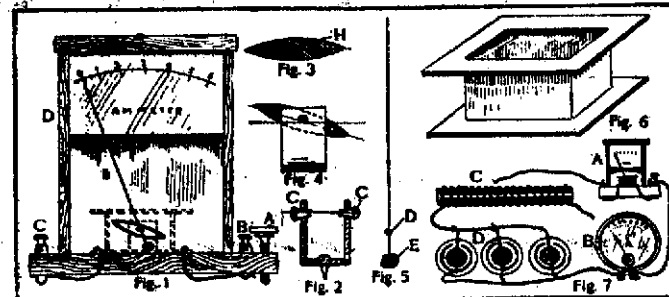

Johnny—Oh, a new kind, that look like a pair of Scotland ponies when they're hitched to my express wagon.

THE ELECTRICAL WORLD

HOW TO MAKE AN AMMETER.

Instrument Which the Amateur Electrician Will Want.

Every amateur mechanic who performs electrical experiments will find use for an ammeter and for the benefit of those who wish to construct such an instrument the following description is given: The operative principle of this instrument is the same as that of a galvanometer, except that its working position is not confined to the magnetic meridian. This is accomplished by making the needle revolve in a vertical instead of a horizontal plane. The only adjustment necessary is that of leveling, which is accomplished by turning the

Complete Ammeter and Details.

thumb screw shown at A, Fig. 1, until the hand points to 0 on the scale.

First make a support, Fig. 2, by bending a piece of sheet brass to the shape indicated and tapping for the screws, C, C. These should have hollow ends, as shown, for the purpose of receiving the pivoted axle which supports the hand. The core, Fig. 3, is made of iron. It is one inch long, one-quarter inch wide and one-eighth inch thick. At a point a little above the center, drill a hole as shown at H and through this hole drive a piece of knitting needle about one-half inch long, or long enough to reach between the two screws shown in Fig. 2. The ends of this small axle should be ground pointed and should turn easily in the cavities, as the sensitiveness of the instrument depends on the ease with which this axle turns.

After assembling the core as shown in Fig. 4, it should be filed a little at one end until it assumes the position indicated. The pointer or hand, Fig. 5, is made of wire, aluminum being preferable for this purpose, although copper or steel will do. Make the wire four and one-half inches long and make a loop, D, one-half inch

from the lower end. Solder to the short end a piece of brass, E, of such weight that it will exactly balance the weight of the hand. This is slipped on the pivot and the whole thing is again placed in position in the support. If the pointer is correctly balanced it should take the position shown in Fig. 1, but if it is not exactly right a little filing will bring it near enough so that it may be corrected by the adjusting screw.

Next make a brass frame as shown in Fig. 6. This might be made of wood, although brass is better, as the eddy currents set up in a conductor surrounding a magnet tend to stop oscillation of the magnet. (The core is magnetized when a current flows through the instrument.) The brass frame is wound with magnet wire, the size depending on the number of amperes to be measured. Mine is wound with two layers of No. 14 wire, ten turns to each layer, and is about right for ordinary experiment purposes. The ends of the wire are fastened to the binding-posts, B C, Fig. 1.

A wooden box, D, is then made and provided with a glass front. A piece of paper is pasted on a piece of

wood, which is then fastened in the box in such a position that the hand or pointer will lie close to the paper scale. The box is five and one-half inches high, four inches wide and one and three-quarter inches deep; inside measurements. After everything is assembled put a drop of solder on the loop at D, Fig. 5, to prevent it turning on the axle.

To calibrate the instrument connect as shown in Fig. 7, where A is the home-made ammeter; B, a standard ammeter; C, a variable resistance and D a battery, consisting of three or more cells connected in multiple. Throw in enough resistance to make the standard instrument read one ohm and then put a mark on the paper scale of the instrument to be calibrated. Continue in this way with two amperes, three amperes, four amperes, etc., until the scale is full. To make a voltmeter out of this instrument, further explains Popular Mechanics, wind with plenty of No. 36 magnet wire instead of No. 14, or if it is desired to make an instrument for measuring both volts and amperes, use both windings and connect to two pairs of binding-posts.

ARE OUT OF THE WAY.

System of Subways for City Pipes and Wires.

European cities are making great headway in the construction of subways beneath the streets to contain not only electric wires for light, power and communication, but also for the gas and water pipes. In London a subway for these utilities is now built whenever a new street is authorized. Some of the London subways are as large as seven feet high by 12 feet wide; there are already seven miles of these pipe subways.

In Manchester the subway has now reached a length of 7,388 feet, and is used exclusively for electric wires, which are contained in pipes carried on iron buckets fastened to the walls. The cost was \$39 per linear foot. Other cities where the system has been built are Leeds, Nottingham and St. Helens. The construction is paid for by the city, which charges an annual rental from the service companies, which more than pays the interest on the cost. These annual charges are based on the diameter of the pipe, ranging from 80 cents for three-inch diameter or less up to \$12.50 for 36-inch per foot for water or gas. For other companies the rate is much higher, being \$6.50 for three-inch pipes and \$20 for 18-inch per 300 feet. The freedom from leaks in water and gas mains, and the ease and economy with which repairs can

Manchester Subway.

be made make the proposition an interesting one to the tenant companies.

Our American cities should take up the pipe subway question, declares Popular Mechanics, and not only provide a revenue producing power for all time to come, but save the ever-lasting tearing up of the streets.

SINGING ELECTRIC ARC.

Is Made Vocal by Connection with the Microphone.

It has been known for some time that the electric arc could be made vocal if attached to a microphone. The discovery was made by M. Simon and was developed by Audinier. Fur-

Ten Thousand Electric Sparks Per Second.

The experiment here illustrated was made by an Indian scientist, Signor Majorana, in explanation of M. Poulsen's invention. Each of the sparks was quite independent.

ther improvements were made by M. Poulsen, who lately explained his instrument at the Queen's hall, London. At the children's lectures at the Royal Institution the lecturer, Mr. Duddell, who had independently discovered and made practicable this property of the electric arc, showed his small audience how it might be used as a telephone. His assistant, Mr. Turbini, went into another room taking with him a microphone—an ordinary transmitter—attached to the arc lamp by a flexible wire. He then whistled into the microphone an operatic selection, and the tones emerged from the arc lamp and were distributed over the theater.

Vacuum and Insulation.

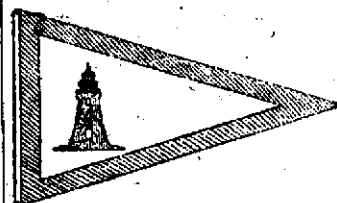

The remarkable heat-insulating effect of a vacuum is strikingly brought out in the claims made for a new sportsman's bottle. The vessel has double walls, being really one bottle within another, with a sealed-up intervening space from which the air has been withdrawn. It is asserted that liquids in this bottle can be kept hot 48 hours in the coldest weather, and that food beverages will retain their deliciousness for weeks in the coldest summer.

LIGHTHOUSE NAVY

A FLEET OF BOATS WHICH NEVER FIRES A GUN.

Pacific, But Tremendously Important, Mission Which One Hundred and Twenty-Two of Uncle Sam's Ships Perform.

For years the United States has been climbing up as a naval power,

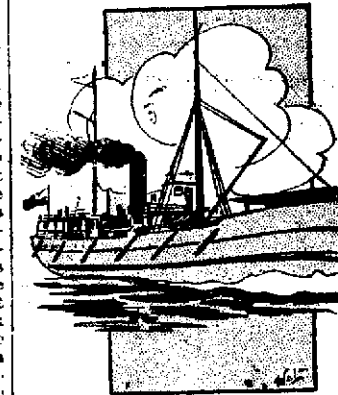

Ensign of the Lighthouse Fleet.

and now is credited as standing second in the list of the nations whose sea-fighting strength places them in the forefront of the world powers, and nearly every American is familiar with the long list of names of the warships, together with their fighting equipment, but probably there are but few who know that Uncle Sam maintains another navy which boasts of no engines of death. In all the 123 ships in commission under its flag there is not a single cannon, not a torpedo, not a machine gun or rifle to deal death to an enemy. The ships are built without turrets, powder magazines or fighting tops, and the sheathing of steel upon their hulls is so thin that a bullet from a boy's cat rifle could almost bore through the wood underneath. But weak as it is no bullying pirate would be desperate enough to give battle to its sailors; no enemy of the Stars and Stripes will ever sink its ships. It is, above all others, the navy of peace, for it is the lighthouse navy, and its work is for all mankind. Without it the fighting navies of the world when near shore could never turn a propeller after dark, the commerce of the nation would be crippled if not annihilated, and passenger steamers, mail boats and pleasure craft would be at the mercy of the waves and reefs as soon as the sun was obscured in the heavens by the fall of night or the swoop of storm. Without its navy the warning beacons maintained by the lighthouse board would go out on a thousand dangerous coasts and treacherous lakes and river shores. Navigation would be standing still part of the time, and human knowledge would shrink and shrivel to the proportions that measured it before the peoples of the earth were able to visit one another across the seas that separate their homes.

The principal ships of the light-

house establishment are, of course, the lightships, which are moored at various points dangerous to navigation along the ocean coast. But there are scores of other vessels, like the steam tenders, which are employed in delivering to the keepers of the lights such supplies of food, fuel and clothing as they need, and the smaller craft that the keepers, their families and employa use.

Lightships of the first class—93 in number, including those now building—are fine-seagoing vessels averaging 350 tons measurement, that are provided with lights, bells and fog whistles. Smaller lightships are maintained on the lakes and rivers. The ocean-going lightships cost in the neighborhood of \$80,000 each; those in use on the lakes and rivers a little less. Of the vessels on the Atlantic coast the older and smaller wooden ships are stationed in the bays, gulfs, sounds and similar sheltered waters. Some of these, obsolescent as they are, cost the government as much as \$50,000 each. The latest improved models have steel hulls. The lightship at Sandy Hook has a revolving lens light, the first ever used on a lightship in this or any other country. Another lightship, at Cornfield Point, Long Island, was the first elec-

Lighthouse Tender Hyacinth on Lake Michigan.

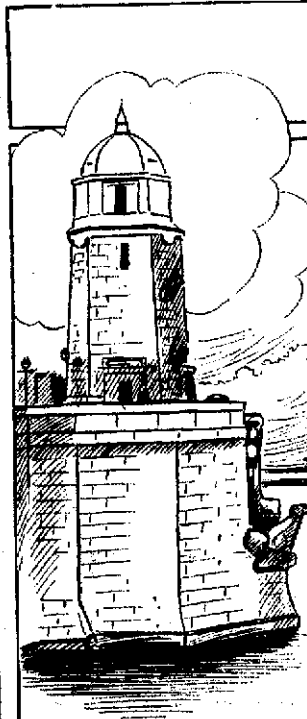

tric lighted vessel of its kind to be built anywhere. The Sandy Hook lightship costs about \$9,000 a year to maintain. Owing to its immense consumption of fuel, the Cornfield Point ship costs more than \$1,000 a year to keep running. The lights of one of these ships will burn more than 1,000 gallons of oil a year. To keep the fog whistle of a lightship sounding its warning requires the expenditure of a ton of coal a day, so one can imagine that to maintain this navy of peace is in its way a luxurious necessity that only a nation with an ample pocketbook could afford.

THE OLD BRIDGE.

ONE IMMORTALIZED BY LONG. FELLOW REPLACED BY NEW.

Massive Granite Structure at Cambridge Which Takes the Place of One on Which the Poet Stood at Midnight.

Could the spirit of Longfellow return it perhaps would be disquieted by the disappearance of the old bridge where the poet loved to linger in the still hours of the night and watch the

One of the Towers of the New Bridge.

ebb and flow of the tide and listen to the rippling of the waters, for the old structure which was immortalized in the poem has given place to a modern structure of massive granite which has just been dedicated by the people of Cambridge, Mass. The new bridge, with its towers and abutments, its arches and its piers, bears little resemblance to the historic old West Boston bridge, whose place it takes.

It was seven years ago, almost to a day, that the first stroke of work was done which was to yield the best bridge in Massachusetts.

The new bridge, while not so long as Harvard Bridge by some 200 feet, is of greater massiveness and solidity. The length over all, including the approaches, is 3,700 feet; subtracting the space taken up by the approaches, the length of the bridge proper is 1,800 feet, and its width 105 feet. The arch of the bridge is divided into 11 spans, varying in length. The large center span, through span, which is 183.5 feet long, down to those on each end, which are 101.5 feet in length. The large center span, through which all vessels pass, has a headway of 26 feet at high tide for a space 50 feet in width, thus allowing tugs, barges and vessels with "telescopic" masts to pass through easily.

The center span, with its four massive towers of granite, is a new departure in bridge building, and like all new things, these towers have been freely criticized from an architectural standpoint. The bridge is, however, as Mr. Jackson, the engineer, puts it, an "engineer's bridge."

Each of the granite centerpieces is elaborately carved. On the Boston side is the city seal on both inner and outer face, while the seal of Cambridge is carved on the faces of the Cambridge side of the center span.

The two stone abutments are hollow, a construction which greatly lessens the weight of the structure. In fact, from end to end the bridge has been built with a view above all to strength and durability, as far as this did not detract from architectural standards. The cost of the bridge amounted to a little over \$2,500,000.

The old West Boston bridge, which was torn down to be replaced by the new one, was a landmark of considerable historical interest. In the latter part of the eighteenth century a company was incorporated, which, on March 9, 1792, was empowered by an act approved by John Hancock to build a bridge from Boston at a point near the posthouse, so-called, to Pelham's Island, Cambridge. The bridge was begun in the summer of 1792, and on Nov. 23, 1793, was opened for traffic. The structure was wooden, 46 feet in width—a plank bridge on pine piles, which were soon destroyed by worms, and were replaced by oak as fast as was consistent with economy and prudence.

The cost was \$23,000, paid for by tolls, which were collected for 49 years.

REMEMBER THE HOME

In laying out plans for the fall and winter don't overlook the home. My easy payment plan will enable you to furnish it and not miss the money. If you need anything in my line come in and talk it over with me.

This solid oak suit, consisting of three pieces, a Dresser, Bed and Washstand, at \$20. Pay me \$4 and \$2 per week.

Let us fix you up a bed with a mattress and spring that will make sleep comfortable and give you a night's rest.

Remember it is my business to please and give my customers satisfaction, and that is what we guarantee to do, both in the quality of the goods, the price and the terms, and you now have our entire line of goods to select from.

Accordingly we again invite you to visit us if you should need anything in the line of furniture or undertaking.

IRON TEETH IN JURY CHARGE

**Judge Dickerson Enjoins Grand Jury
to Indict for Liquor Offenses if Bev-
erage Contains Least Bit of Alcohol
or of Malt.---U. S. Court Formally
Convened.**

"If one sells liquor containing any alcohol whatever, or any malt, what-
ever be the name under which it is
sold, it is your duty when the facts are
brought before you, to indict that
man." These words from Judge Dick-
erson in his charge to the grand jury
constituted the most sensational fea-
ture of the opening day of U. S. court.

"There is no such thing as the so-
called 'Territorial drinks,' continued
he, 'the Territory court of appeals has
decided clearly that any drink is un-
lawful however small be the percent
of alcohol or of malt. That is the
law.' The judge in his charge gave
particular emphasis to violations of
the liquor law, saying in that connec-
tion: 'If any of you grand jurors
need any bracing up of the backbone,
you should find it in the results of the
recent election on the prohibition is-
sue, which show this community as
well as nearly every other commu-
nity in the territories, wants laws
against liquor and wants them en-
forced. No longer can be urged the
old argument for leniency and loose-
ness, that 'the people do not want the
harsh laws against the liquor traffic
enforced.'"

In addition the court made special
mention, as required by law, of gam-
bling and the grand jury were im-
paneled, and directly after noon he
delivered his charge to the latter,
whereupon he proceeded to sound the
civil docket to ascertain how many
cases were ready for trial.

The following representative citi-
zens of Pontotoc county constitute the
grand jury:

J. C. Cates, foreman, R. E. Haynes,
J. A. Biles, J. F. M. Harris, H. C.
Russell, T. Spencer, H. A. Hodges,
C. M. McClain, N. B. Butler, Price
Starter, W. P. Chism, J. S. Gish, Jno.
McKoy, M. M. Sanders, J. H. Hilburn,
W. W. Burkhardt.

These fifteen were sworn in as peti-
ty jurors and fifteen more talesmen
were ordered summoned:

Vie Florence, W. L. Jones, P. M.
Jinks, R. W. Rhea, W. H. Nettles, R.
W. Campbell, G. W. Lowrey, Cole
Emory, W. H. Ryan, John Murphy, J.
W. Salter, J. M. Sawyers, Geo. Garrett,
J. R. Allen, Wiley Hunt.

The genial Colonel Tom Smith is at
his post as court crier; Miss Alma
Harrison, from Chickasha, is the court
stenographer this term; Judges Alex-
ander Gullet and Eugene Hamilton
represent the government in the prose-
cutions and before the grand jury.

If you did not get to attend
our showing of Fall Dress Goods

ments on Friday or Saturday,
come in during this week and
let us show you through.

Our stock is very complete
and we are sure that we will be
able to please you.

COX-GREER McDONALD CO.

ling, carrying weapons and disturbance
of public worship. Also he enjoined
the grand jury to investigate the of-
fense of dealing in futures, "an offense
productive of evil just as any other
gambling is; one not only demoral-
izing to those who indulge, but also
to the farmers by reason of its build-
ing up fictitious markets." Intimating
that he had been informed that within
this district recently there had
been municipal officers winking at
lawlessness, the judge charged the
jury to make thorough investigations.

Judge J. T. Dickerson arrived from
Chickasha at eleven a. m. and imme-
diately convened court for the three term today.

Woman's Strange Story--Accuses
Mountaineer of Crime.

Richmond, Ind., Sept. 22.--Turner
Igo of Farmers, Rowan county, Ky.,
is charged with killing Governor Wil-
liam Goebel of Kentucky in an aff-
davit by Mrs. Lula Clark, which was
published by the Richmond (Ind.)
Times. Mrs. Clark's affidavit was taken at
Richmond, Ind., before Judge Igo.

I. HARRIS
Clothier and Gents Furnisher

Indianapolis on April 11, 1907, in the
law office of former Gov. W. S. Taylor
of Kentucky. She is a niece of Frank
Day of Frankburg, Ky., and also of
James Williams of the same place. She
has a cousin named Gertrude King
who lived at Maysville at the time of
the killing of Goebel. Miss King at
that time was keeping company with
John Stanford of Covington, Ky.

Upon the day Goebel was slain the
two girls went to Frankfort, Ky. They
started to enter the state house by a
rear entrance and when on the steps
a shot was fired. At the same time
they noticed a man standing just out-
side the door whom they recognized as
Stanford.

In a minute the second man came
running out of the building dressed
like a mountaineer and carried a rifle.
He ran to Sanford and said I got the
man. That man was recognized by the
affiant as her friend, Turner Igo of
Farmers, Rowan county, Ky.

Both men ran out of the building to
a fence where Sanford gave a pair of
shoes which he was carrying to Igo,
who exchanged his boots for them.
The man then disappeared.

Affiant states that Igo told her at
Mount Sterling on Jan. 25, 1900, that
he was going to kill Goebel, and she
saw him afterward at Jeffersonville.

in, and he reminded her he had ful-
filled his promise.

She also says Sanford told Gertrude
King a few days prior to Goebel's mur-
der that he intended killing Goebel,
saying, "here is my chance to get re-
venge, the legislature has met."

New Line to the Gulf.

Guthrie, Okla., Sept. 21.--A charter
has been granted to the Wichita, Cleve-
land & Gulf railway, with headquar-
ters at Cleveland, Okla., and \$50,000-
000 capital stock, to build 634 miles
from Wichita, Kansas, through the
counties of Sedgewick, Butler, Cowley
and Chautauqua, in Kansas, the coun-
ties of Pawnee and Osage in Oklaho-
ma, the Cherokee, Creek and Choctaw
Nations, and the states of Arkansas,
Texas and Louisiana, to the gulf. The
incorporators include David Ratner, J.
F. Feathering, J. C. Byers, R. L.
Lunsford and A. Cecanko.

Mrs. Bond Passes Away.

Mrs. J. M. Bond, after lingering with
slow fever several weeks, began sink-
ing rapidly Sunday, and in spite of all
efforts to revive her, passed away Mon-
day morning at 6 o'clock. The re-
mains were shipped to Madrid for in-
terment.

Ada Evening News

OTIS B. WEAVER, Editor and Owner
HOWARD PARKER, Associate Editor

Entered second-class mail matter March 26, 1904, at the post office at Ada, Indian Territory under the Act of Congress March 3, 1879.

THE PRESIDENT AND THE OKLAHOMA CONSTITUTION.

The Oklahoma constitution under the provisions of the enabling act, which permitted a vote on the question of statehood must be endorsed by the president before the new state can be admitted to the Union. It is possible that the president will reject the constitution and therefore deny statehood to the two territories, but it is certain that some higher motive will prompt such executive action than the mere fact that Oklahoma elected a democratic state ticket and sent three or four democrats to congress in the election last Tuesday.

The Oklahoma republicans who assume that the constitution will not receive endorsement at the White House because it would admit a democratic state to the Union are making themselves ridiculous in the eyes of the country. The president's duty is a judicial one. The limitations of his powers in the acceptance or rejection of the instrument are limited to two distinct propositions—a determination of the constitution's compliance with the enabling act passed by congress and the harmony of its provisions with the federal constitution.

Secretary Taft in his speech in Oklahoma City made the president's position clear. For this reason he warned the voters against the defects in their constitution as they affected the citizens of the state. These defects may be apparent to the president and yet prove no bar to his approval of the document as a whole.

Statehood is not to be denied Oklahoma for political reasons. The defeated politicians who take comfort in that assumption will be doomed to disappointment. If they can present no more tangible excuse for the rejection of the constitution than that the state gave a democratic majority or that the best interests are displeased with the adoption or prohibition Oklahoma is certain to realize its hopes for immediate statehood—Kansas City Star.

ROUGH RIDERS IN VALDIVILLE

Governor Frank Frantz and Colonel Charles Hunter, chairman of the republican state committee, are preparing to lead a party of the new state to a no-el speech in a kind of rough rider valdiville.

Though every man, woman and child in Oklahoma and Indian Territory knows that the democrats have carried the constitution the state officers and the legislature by over whelming majorities these two individuals surly declare it is not so that there has been fraud in the election and that they will continue their fight against statehood.

They do not say they are fighting statehood but no one doubts that to be their meaning.

These leaders of a full hope in the recent campaign practically asked the people of these two territories to stultify themselves in the eyes of the nation by voting down the best constitution ever written in the history of statehood after the people had been laboring for statehood for many years.

But the people repudiated these men by an overwhelming vote making such a clean sweep in the election that there is left no room for doubt as to the results.

And yet these worthies have the audacity to appeal before the people and deny that the democrats have won a landslide and they dramatically raise the cry of fraud in the election.

So undignified and feeble is their conduct that it merely arouses the suspicions of their neighbors and make them the laughing stock of the powers that be at Washington if they carry their troubles to the national capital. After all however it is really pitiable and some of their good friends will do them a kindness by drawing the curtain.

It is the end of the last act in that monotonous and trying play "The Carpetbaggers"—Oklahoman.

Judge Dickerson's charge to the grand jury today was all that a clean citizen could ask. He told them not to spare any violator of law whether he be high or low.

Shawnee Man for Speaker.

Shawnee Sept 23—Milton Bryan a Shawnee attorney elected on the democratic ticket to the state legislature, has announced his candidacy for speaker of the house. He served as a member of the last Territorial legislature of Oklahoma and has received the endorsement of several successful candidates of their support.

Today's Cotton Market.
Futures dropped \$2 a bale in New Orleans, \$1.75 in New York.
New Orleans spots down 1/4 of a cent—11 1/2. New York spots down 80 points—11.90.

WAS A GREAT RALLY AT ROFF

Amid Great Enthusiasm Democrats of Pontotoc County Ratify Results of the Recent Election.—Jubilant Till Midnight Hour.

It was a roaring big ratification of the election that jubilee held by the democrats at Roff Saturday night.

The crowd was not so representative of the whole county as desired, because there was not sufficient time to advertise the event well in the country districts and Ada democrats were unable to secure the special train hoped for. But everybody in Roff was on hand and they made a crowd by themselves. Besides there were a number present from Ada and other places.

The meeting continued in full swing till midnight. Anvil's boomed forth orators smote the air with their eloquence and the assembled hundreds shouted their jubilation.

Among the speakers of the evening were Delegate Franklin of Madill, Tom Smith and Rev. Hicks of Roff, Henry M. Furman, Robt. Wimberly, R. M. Roddie and Geo. Thompson of Ada.

The crowd applauded tremendously when Judge Furman in the following words drew the contrast between the republican eagle and the democratic rooster.

The principles and practices of the republican and democratic parties are fully illustrated by their emblems. The emblem of the republican party is the eagle. The emblem of the democratic party is the rooster.

NOT TILL DECEMBER, MAYBE

Will Probably Take That Long for Statehood to Reach Proclamation Stage.

Guthrie Sept. 2.—As the constitution and statewide prohibition have been adopted and state officers chosen the election ordinance as drawn by the constitutional convention provides that the state canvassing board must begin its work on October 3. The ordinance requires this board shall be Chief Justice Buford of Oklahoma, Chief Justice Clayton of Indian Territory and Territorial Secretary Fulton of Oklahoma and following the conclusion of their work then the two judges named together with Governor Frank Frantz shall certify the results to President Roosevelt together with the statement of the votes cast and copy of the constitution and all ordinances.

No time limit is set when these matters must be certified to President Roosevelt but the president must act within sixty days after receiving the constitution. In all probability the constitution will not reach President Roosevelt before November 1, especially if the content on is upheld that the board must prepare a certified copy of the original of the constitution and forward it to the president. This would give the president until December to pass upon the constitution.

The contention is made by Assistant Attorney General Bonaparte at Washington that under the federal constitution congress exceeded its authority when it delegated its power to admit states to President Roosevelt as the federal constitution expressly provides that congress alone can admit states into the union. Elkins maintains that the question of admittance comes when the United States senators and congressmen from Oklahoma shall present their certificates of election and the quorum is put on the floor of the houses shall they be seated? It is believed by Elkins that Attorney General Bonaparte will advise President Roosevelt that congress cannot admit the new state and that under such conditions Roosevelt will refer the constitution to congress. Governor Frantz leaves this week to join President Roosevelt at Keokuk, Ia. to accompany him on the Mississippi river trip. It will be with the president a week and the Oklahoma constitution will be discussed and its fate probably determined.

BURGLARS MAKE SECOND VISIT.

Coffman & Owens Touched for \$175

Worth of Pistols and Knives.
For the second time in six weeks burglars broke into the hardware store of Coffman & Owens Sunday night and carried off a lot of firearms and cutlery. This time they took about 15 pistols and four dozen good knives, valued at \$175. Evidently the thieves had their bearings well for most of the goods were taken away in a box wherein the owners had tried to conceal them. Six weeks ago in a similar way this firm was touched.

for \$1. worth of guns and knives. Frantz this time was effected the same way by breaking a rear window which was easily done since there were no shutters or bars. The owners of the building have steadfastly refused to pay for any fortifications of the windows.

No clue to the identity of the robbers has been discovered but blood hounds at Tupelo have been wired for and the march to and the officers will make a determined effort to trail the thieves and their loot.

At 3:30 the dogs having arrived from Tupelo followed a trail from the store to some weeds near the compass where was found the box which once contained the pistols and cutlery. From there they trailed down the Katy right of way toward Stonewall.

Election Cost \$65,000

The election of last Tuesday cost about \$65,000 according to Charles H. Johnson territorial secretary who bases his estimates on the cost of other elections and this includes the printing of the ballots and other expenses. Twelve thousand election officers were employed.

A deficiency appropriation covering the expense will be asked of congress at its coming session and in case congress does not grant it then the legislature of the new state will be petitioned to make it good. An attempt was made during the last congress to get a \$135,000 deficiency appropriation for the constitutional convention and this election but the request was not granted.

Admission to the election was free. The following table shows the results of the election in the various counties of the territory.

County	Rep.	Dem.	Total
Adair	1,200	1,800	3,000
Adams	1,500	2,500	4,000
Adelphi	1,000	1,500	2,500
Adrian	1,200	1,800	3,000
Adrian	1,200	1,800	3,000
Adrian	1,200	1,800	3,000
Adrian	1,200	1,800	3,000
Adrian	1,200	1,800	3,000
Adrian	1,200	1,800	3,000
Adrian	1,200	1,800	3,000

A Substitute.
He is very much liked and has been allowed to keep his costly habit of smoking. He himself is himself but when anyone tried to smoke him on one occasion when the party he was with entered a shop to buy a cigar he made up his mind to have his share of the treat. Won't you smoke this time? as one of the party said. No thank you, replied Mason. But if you don't mind I believe I will smoke a pencil. —Harpers Weekly.

It's the Brogue

"Why do we call a bandit's 'brogue'?" asked the commissioner an Irish recruit at a recent police examination. "Faith, because it is so tender for arrest," replied the applicant. And he got the position at once.

TWO CONTENTS PROBABLE.

Vote Very Close in Both Second and Third Congressional Districts.

Oklahoma City Sept 22.—There is every prospect for a contest over the Third Congressional districts where both parties claim majorities. Ex-Governor Thomas B. Ferguson republican candidate in the Second district visited state headquarters Saturday and was in consultation with State Chairman Hunter. Mr. Ferguson claims to have carried nine of the fifteen counties with a total majority over Fulton (Dem.) of about 100. It is admitted at republican headquarters that the vote was close and it is said democrats are claiming majorities which do not exist. Mr. Ferguson declares that his reduced majority is due to the success of the democratic ticket in twelve of the fifteen counties a local sweep not anticipated. Irregularities are charged in Oklahoma, Ellis and Harper counties. Mr. Fulton is claiming the district by more than 500 majority.

In Muskogee district a similar situation prevails. Grant Hector of Clinton 1 T., who managed the republican congressional campaign there was also at state headquarters Saturday and claims the district for F. C. Hubbard (Rep.) by approximately 500. Hubbard is alleged to have carried Muskogee, Okmulgee, Okfuskee and Wagoner counties but these are also claimed by the democrats.

The democratic congressional committee has not withdrawn its original estimate of Davenport's majority being about 1,000.

It is estimated here that contests probable in both districts in connection with the Third district election fraud is alleged on the part of the republicans in Muskogee and Wagoner counties as well as irregularities. The negro vote in both counties is said to have been heavy.

CROCKERY.

China, Crockery, Glassware

How many dishes are missing complete new set now? We are selling nice gold decorated dinnerware as others are selling the plain white same quality.

Cups and Saucers, gold decorated, 10c.

Bowls and Bakers, 15c, 18c, and 24c.

Platters, Oat Meals, Fruit Sauces, Cereal Dishes, Pitchers, etc. Complete set of this gold decorated goods of 44 pieces, \$4.13.

We have fine China Ware in great variety from the cheaper ware up to the high grades.

5c and 10c Tables.

Our 5c and 10c Tables are bubbling over with very attractive offers.

Lamps. Good values in glass lamps. 25c, 30c, 35c, 40c. Table Knives 5c, 30c, 35c, 40c.

Table Knives and Forks, from 50c to \$1.50 per set.

Our Special Teaspoons at 10c per set.

Our Special Table Spoons at 20c per set.

Come in and look and never mind about buying unless you can be convinced we are saving you money. Thanking our many patrons for their liberal share of business, and seeking new business we remain,

Very respectfully,

The Nickel Store

AND CHINA HALL.

EXPERT OPTICIAN

DEWEY DIVED INTO DEEP WELL.

Young Namesake of the Admiral Fell 37 Feet—Unhurt.

Admiral George Dewey accomplished a wonderful deep water feat off Manila and came out unscathed. It was left for a nine year old namesake of his in Ada to also do a deep water stunt and marvelously to come forth unharmed.

Dewey Earls is one of a destitute family residing on North Broadway.

The family gets water from Jim Edwards' well, which is thirty-seven feet deep, about five feet in water.

Dewey was sent for a pail of water.

In peeping down the hole he leaned too far, and fell in head foremost.

Rising to the surface he grasped the rope and was hauled out unharmed.

His hat was found stuck in the mud in the bottom of the well.

Back from Gotham.

A. W. and Foster Simpson returned Sunday from New York City where they have been for several weeks buying stock the former for his surprise store, the latter for a similar store soon to be established at Konawa by himself and Roy Hays. Foster says Gotham got awful tiresome to him—too much noise and too many people.

On the sidewalks he had to fight his way to make any progress. Hoping to escape the madding crowd, he dived into a subway car, found a seat all right, but three or four people sat on top of him.

After going some fifteen miles he emerged to the surface only to find the same mad throng. Back to the tranquil Southwest for Foster!

Negro Wasn't Satisfied.

The story is being told on one of the republican candidates while out in western Oklahoma the following conversation was overheard with a negro voter.

When is their equality laws going into effect? asks the negro.

Why my dear fellow the equality laws are already in effect. You are as good as I am right now. I know dat, replied the negro, but what I want to know is when I se to be as good as the rest of the white folks, responded the negro.

Court of Appeals to Meet.

The court of appeals for the territory will meet at South McAlester Tuesday possibly for the last time prior to statehood and it is stated that an effort will be made to dispose of all cases and clear the docket. Some important decisions are expected to be handed down.

ANY SAVE LEVEL HEADED MAN OR WOMAN who will examine the Beckwith Round Oak Coal Heater can readily see why it has made its mark as the best coal heater on earth. Ada Hardware Co. 137-11

Automobiles.

Slightly used four cylinder touring car, good as new, completely refinished and painted. A bargain for quick sale. Also two cylinder touring car, repainted and in first-class condition. A snap.

Ok'ahoma Motor Car Co., 515 West Main St. Ok'ahoma City.

Our White Wonder Flour.

The standard of excellence, manufactured upon the latest scientific principles from selected pure soft wheat expressly for the higher class trade guaranteed absolutely pure and superior in quality. The greatest care is used in the manufacture of our White Wonder flour and we guarantee it to be uniform, reliable and superior to any flour made.

We guarantee every sack of our White Wonder flour to give perfect satisfaction for bread, biscuits and all kinds of pastry.

If our White Wonder flour is not found as represented we will deem it a favor to allow us to refund your money and make everything satisfactory.

YOUTH'S DEFENDER

FUN FOR THE BOYS.

How to Make and Shoot the Minnie Darts.

Do you like to play with a Minnie dart? Well, perhaps the picture will explain, and if you do not understand it I'll do my best to make one. Try it your- self, and you will enjoy both making and playing with it. Whittle a pine stick perfectly straight and

Making the Darts.

round, a little larger in diameter than a lead pencil. The stick should be two feet long. With a small saw cut in one end a slit about five inches deep. Into this slit insert a piece of cardboard, first cutting it the shape of Fig. 1. Tack it in place with two or three tacks. When this is done, balance the dart on your knife blade to find the center of gravity, and at the point of balance cut a notch slanting in the direction of the point away from the card end. The success of the toy, says Philadelphia Ledger, depends on balancing correctly. A piece of some springy wood is used for the back. Cut this about three feet long and the diameter of a whip handle, tapering toward the end. To the tapering end of this stick fasten a stout string about two feet long and at the other end of the string tie a knot. To shoot the dart hold it with the left hand near to the tail, or paper, end, holding the whip in the right, just like you see the boy in the picture doing. Throw the string over the dart and draw it through the notch until it catches on the

Throwing the Darts.

knot. Then, with a rapid upward motion, switch the whip in the air, letting go to the dart at the same time. The dart will leave the string and soar high into the air.

MARY'S FISHING.

It Was All Right Until She Caught a Real Live Spider.

The other day Mary, aged four, was having a most exciting time fishing from the nursery window. She had a long string that reached to the top of a tall rose bush in the garden.

"Now I have caught a whale!" laughed she. And up she hauled a whale that weighed several tons at least, judging by the tugs and grunts that Mary gave. This monster was safely landed on the nursery floor, and the line again lowered. Next came a swordfish, which was followed by other terrible creatures that caused Mary a fresh shout of joy each time. Suddenly her mirth was changed to a horrible groan, and then a cry of blood-curdling fright. Mother ran to see what had happened.

Coming up, the string—possibly to see what had become of all the sea monsters—was a pretty little black and yellow spider. Nearer and nearer it was crawling, and closer and closer, Mary held the string.

"Save me!" she sobbed. "Oh, the awful thing will eat me up!"

"Let go!" laughed the mother. Mary and never once thought of that awful. The right hand relaxed, and all danger was past.

"Dear me!" said Mary later from the nursery harbor of mother's arm. "A really, truly spider is a lot worse than a make-believe alligator—why, mother, why?"

Fell Out Once.

Tourist (whose Johnny is showing the night)—I suppose, people fall down this steep cliff often, don't they?

Johnny—No, sir; once is enough for most of 'em.

A GOOD KITE.

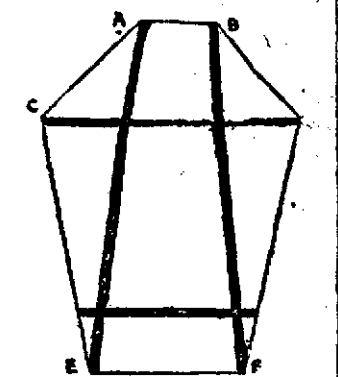

Make the One You Fly and You Will Take Pride in It.

Kite-flying is one of the best outdoor amusements that a boy could have. Indeed, we know a good many men that enjoy it as much as they did when they were young. The writer of this is one of them. There is a fascination about it that is not easily described. City boys have little chance to indulge in the sport, except when they go to the country or the seashore, during vacation, but those that live in the suburbs, or in places where they may conveniently reach the open fields, ought all to have their kites.

Fancy designs of all kinds are sold in the shops, but if a boy wishes to have all the fun there is in the sport, he ought to make his own kite. Besides, it will give him better service. The accompanying cut shows how a good flyer may be made. Out of some straight-grained, light wood—cedar preferred—make four sticks, about one-eighth of an inch in thickness. Let two of them be 22 inches in length; one 17 1/2 inches, and the other 13 1/2 inches. Place them as shown in the picture, and tack them firmly where they cross. Cut little notches at the ends of the sticks, and put a string around the whole frame, making it taut and tying it so that it will not slip.

Now cut out a piece of very thin manila paper—tissue paper would do, but thin manila is more serviceable—one inch larger, all around, than the frame, and paste the edge over the string. Make a small hole in the end of the sticks at A, B, C, D, E, and F, and put in a string loosely from A to F, from B to E, and from C to D. Make a string loop from B to F, to which the tail of the kite is to be attached. The strings must come through to the paper side of the kite, not the stick side.

The cord by which you are to fly the kite should be attached where the strings cross each other; do this with

The Kite Frame.

a loose knot enclosing all the strings. For the tail, explains Chicago News, use a strip of muslin about one inch in width and 15 feet in length and attach ten bobs made of paper rolled up. If the kite should dive, add more tail until it sails steadily.

A TOY AIRSHIP.

You Can Make One Which Will Move Through the Air.

Make two paper cones. Close the small end of each with a cork, as shown in Fig. 1.

Thrust a needle through each of the corks. Bend the points of the needles that protrude from the corks toward the inside of the cones, so as to form hooks. Run a strong elastic from one to the other of these hooks.

Paste your cones together, joining them with a band of thin paper.

Bend the part of the needle that sticks out from one of the corks at right angles to form a sort of handle.

Cut out a screw propeller like that shown in Fig. 3. Attach it, between

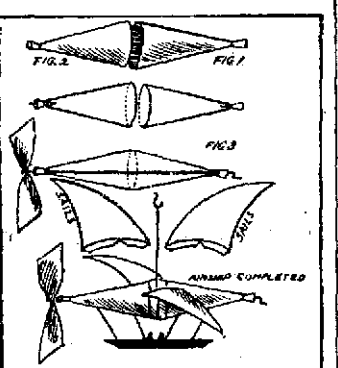

Diagram from Which to Work.

balls of wax, to the needle at the other end.

Cut out little wings and paste them at the middle of each side of the cones, so that they will serve to balance your airship in its flight.

Suspend a little "basket" to the cones by threads and your airship is complete.

To make it fly, turn the handle at one end, so that the elastic is twisted tightly. Upon releasing it, explains the Los Angeles Times, the elastic will turn the corks, causing the propeller to revolve rapidly. Your airship will continue to fly until the elastic is unwound.

Johnny's Wish.

Johnny—I wish I had a pair of goats.

Mother—What kind of goats, son?

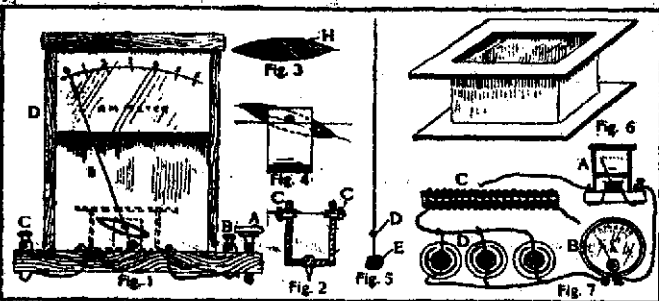

Johnny—Oh, a new kind, that look like a pair of Shetland ponies when they're hitched to my express wagon.

HOW TO MAKE AN AMMETER.

Instrument Which the Amateur Electrician Will Want.

Every amateur mechanic who performs electrical experiments will find use for an ammeter and for the benefit of those who wish to construct such an instrument the following description is given: The operative principle of this instrument is the same as that of a galvanometer, except that its working position is not confined to the magnetic meridian. This is accomplished by making the needle revolve in a vertical instead of a horizontal plane. The only adjustment necessary is that of leveling, which is accomplished by turning the

Complete Ammeter and Details.

thumb screw shown at A, Fig. 1, until the hand points to 0 on the scale.

First make a support, Fig. 2, by bending a piece of sheet brass to the shape indicated and tapping for the screws, C, C. These should have hollow ends, as shown, for the purpose of receiving the pivoted axle which supports the hand. The core, Fig. 3, is made of iron. It is one inch long, one-quarter inch wide and one-eighth inch thick. At a point a little above the center, drill a hole as shown at H and through this hole drive a piece of knitting needle about one-half inch long, or long enough to reach between the two screws shown in Fig. 2. The ends of this small axle should be ground pointed and should turn easily in the cavities, as the sensitiveness of the instrument depends on the ease with which this axle turns.

After assembling the core as shown in Fig. 4, it should be filed a little at one end until it assumes the position indicated. The pointer or hand, Fig. 5, is made of wire, aluminum being preferable for this purpose, although copper or steel will do. Make the wire four and one-half inches long and make a loop, D, one-half inch

from the lower end. Solder to the short end a piece of brass, E, of such weight that it will exactly balance the weight of the hand. This is slipped on the pivot and the whole thing is again placed in position in the support. If the pointer is correctly balanced it should take the position shown in Fig. 1, but if it is not exactly right a little filing will bring it near enough so that it may be corrected by the adjusting screw.

Next make a brass frame as shown in Fig. 6. This might be made of wood, although brass is better, as the eddy currents set up in a conductor surrounding a magnet tend to stop oscillation of the magnet. (The core is magnetized when a current flows through the instrument.) The brass frame is wound with magnet wire, the size depending on the number of amperes to be measured. Mine is wound with two layers of No. 14 wire, ten turns to each layer, and is about right for ordinary experiment purposes. The ends of the wire are fastened to the binding-posts, B, C, Fig. 1.

A wooden box, D, is then made and provided with a glass front. A piece of paper is pasted on a piece of

wood, which is then fastened to the box in such a position that the hand or pointer will lie close to the paper scale. The box is five and one-half inches high, four inches wide and one and three-quarter inches deep; inside measurements. After everything is assembled put a drop of solder on the loop at D, Fig. 5, to prevent it turning on the axle.

To calibrate the instrument connect as shown in Fig. 7, where A, is the home-made ammeter; B, a standard ammeter; C, a variable resistance and D a battery, consisting of three or more cells connected in multiple. Throw in enough resistance to make the standard instrument read one ohm and then put a mark on the paper scale of the instrument to be calibrated. Continue in this way with two amperes, three amperes, four amperes, etc., until the scale is full. To make a voltmeter out of this instrument, further explains Popular Mechanics, wind with plenty of No. 36 magnet wire instead of No. 14, or if it is desired to make an instrument for measuring both volts and amperes, use both windings and connect to two pairs of binding-posts.

ARE OUT OF THE WAY.

System of Subways for City Pipes and Wires.

European cities are making great headway in the construction of subways beneath the streets to contain not only electric wires for light, power and communication, but also for the gas and water pipes. In London a subway for these utilities is now built whenever a new street is authorized. Some of the London subways are as large as seven feet high by 12 feet wide; there are already seven miles of these pipe subways.

In Manchester the subway has now reached a length of 7,386 feet, and is used exclusively for electric wires, which are contained in pipes carried on iron buckets fastened to the walls. The cost was \$39 per linear foot. Other cities where the system has been built are Leeds, Nottingham and St. Helena. The construction is paid for by the city, which charges an annual rental from the service companies, which more than pays the interest on the cost. These annual charges are based on the diameter of the pipe, ranging from 60 cents for three-inch diameter or less up to \$12.50 for 36-inch per foot for water or gas. For other companies the rate is much higher, being \$5.50 for three-inch pipes and \$20 for 18-inch per 300 feet. The freedom from leaks in water and gas mains, and the ease and economy with which repairs can

Manchester Subway.

be made make the proposition an interesting one to the tenant companies.

Our American cities should take up the pipe subway question, declares Popular Mechanics, and not only provide a revenue producing power for all time to come, but save the everlasting tearing up of the streets.

SINGING ELECTRIC ARC.

Is Made Vocal by Connection with the Microphone.

It has been known for some time that the electric arc could be made vocal if attached to a microphone. The discovery was made by M. Simon and was developed by Autmer. Nur-

Ten Thousand Electric Sparks Per Second.

The experiment here illustrated was made by an Italian scientist, Signor Majorani, in explanation of M. Poulson's invention. Each of the sparks was quite independent.

ther improvements were made by M. Poulson, who lately explained his instrument at the Queen's hall, London. At the children's lectures at the Royal Institution the lecturer, Mr. Duddell, who had independently discovered and made practicable this property of the electric arc, showed his small audience how it might be used as a telephone. His assistant, Mr. Turbini, went into another room taking with him a microphone—an ordinary transmitter—attached to the arc lamp by a flexible wire. He then whistled into the microphone an operatic selection, and the tones emerged from the arc lamp and were distributed over the theater.

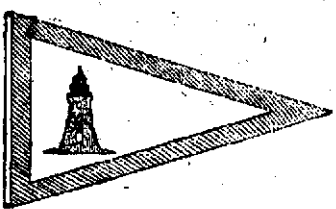

Vacuum and Insulation. The remarkable heat-insulating effect of a vacuum is strikingly brought out in the claims made for a new sportsman's bottle. The vessel has double walls, being really one bottle within another, with a sealed-up intervening space from which the air has been withdrawn. It is asserted that liquids in this bottle can be kept hot 48 hours in the coldest weather, and that food beverages will retain their delicious coolness for weeks in the hottest summer.

LIGHTHOUSE NAVY

A FLEET OF BOATS WHICH NEVER FIRES A GUN.

Pacific, But Tremendously Important, Mission Which One Hundred and Twenty-Two of Uncle Sam's Ships Perform.

For years the United States has been climbing up as a naval power,

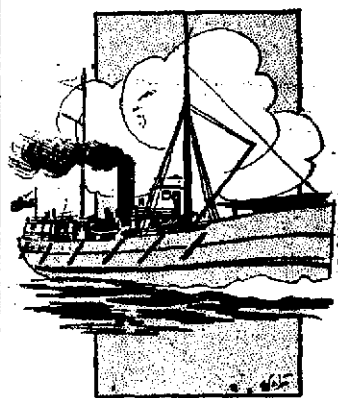

Ensign of the Lighthouse Fleet.

and now is credited as standing second in the list of the nations whose sea-fighting strength places them in the forefront of the world powers, and nearly every American is familiar with the long list of names of the warships, together with their fighting equipment, but probably there are but few who know that Uncle Sam maintains another navy which boasts of no engines of death. In all the 122 ships in commission under its flag there is not a single cannon, not a torpedo, not a machine gun or rifle to deal death to an enemy. The ships are built without turrets, powder magazines or fighting tops, and the sheathing of steel upon their hulls is so thin that a bullet from a boy's cat rifle could almost bore through the wood underneath. But weak as it is no bullying pirate would be desperate enough to give battle to its sailors; no enemy of the Stars and Stripes will ever sink its ships. It is, above all others, the navy of peace, for it is the lighthouse navy, and its work is for all mankind. Without it the fighting navies of the world when near shore could never turn a propeller after dark, the commerce of the nation would be crippled if not annihilated, and passenger steamers, mail boats and pleasure craft would be at the mercy of the waves and reefs as soon as the sun was obscured in the heavens by the fall of night or the swoop of storm. Without its navy the warning beacons maintained by the lighthouse board would go out on a thousand dangerous coasts and treacherous lakes and river shores. Navigation would be standing still part of the time, and human knowledge would shrink and shrivel to the proportions that measured it before the peoples of the earth were able to visit one another across the seas that separate their homes.

The principal ships of the light-

house establishment are, of course, the lightships, which are moored at various points dangerous to navigation along the ocean coast. But there are scores of other vessels, like the steam tenders, which are employed in delivering to the keepers of the lights such supplies of food, fuel and clothing as they need, and the smaller craft that the keepers, their families and employa use.

Lighthips of the first class—\$3 in number, including those now building—are fine-seagoing vessels averaging 350 tons measurement, that are provided with lights, bells and fog whistles. Smaller lightships are maintained on the lakes and rivers. The oceangoing lightships cost in the neighborhood of \$30,000 each; those in use on the lakes and rivers a little less. Of the vessels on the Atlantic coast the older and smaller wooden ships are stationed in the bays, gulfs, sounds and similar sheltered waters. Some of these, obsolescent as they are, cost the government as much as \$50,000 each. The latest improved models have steel hulls. The lightship at Sandy Hook has a revolving lens light, the first ever used on a lightship in this or any other country. Another lightship, at Cornfield Point, Long Island, was the first elec-

Lighthouse Tender Hyacinth on Lake Michigan.

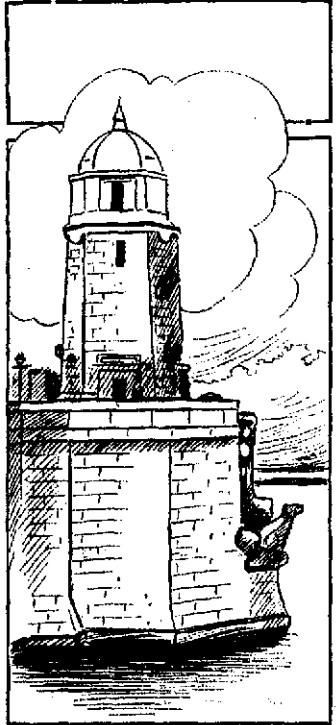

tric lighted vessel of its kind to be built anywhere. The Sandy Hook lightship costs about \$9,000 a year to maintain. Owing to its immense consumption of fuel, the Cornfield Point ship costs more than \$1,000 a year to keep running. The lights of one of these ships will burn more than 1,000 gallons of oil a year. To keep the fog whistle of a lightship sounding its warning requires the expenditure of a ton of coal a day, so one can imagine that to maintain this navy of peace is in its way a luxurious necessity that only a nation with as ample pocketbook could afford.

THE OLD BRIDGE.

ONE IMMORTALIZED BY LONGFELLOW REPLACED BY NEW.

Massive Granite Structure at Cambridge Which Takes the Place of One on Which the Poet Stood at Midnight.

Could the spirit of Longfellow return it perhaps would be disquieted by the disappearance of the old bridge where the poet loved to linger in the still hours of the night and watch the

One of the Towers of the New Bridge.

ebb and flow of the tide and listen to the ripping of the waters, for the old structure which was immortalized in the poem has given place to a modern structure of massive granite which has just been dedicated by the people of Cambridge, Mass. The new bridge, with its towers and abutments, its arches and its piers, bears little resemblance to the historic old West Boston bridge, whose place it takes.

It was seven years ago, almost to a day, that the first stroke of work was done which was to yield the best bridge in Massachusetts.

The new bridge, while not so long as Harvard bridge by some 200 feet, is of greater massiveness and solidity. The length over all, including the approaches, is 3,700 feet; subtracting the space taken up by the approaches, the length of the bridge proper is 1,800 feet, and its width 105 feet. The arch of the bridge is divided into 11 spans, varying in length. The large center span, through which is 183.5 feet long, down to those on each end, which are 101.5 feet in length. The large center span, through which all vessels pass, has a headway of 26 feet at high tide for a space 60 feet in width, thus allowing tugs, barges and vessels with "telescope" masts to pass through easily.

The center span, with its four massive towers of granite, is a new departure in bridge building, and like all new things, these towers have been freely criticized from an architectural standpoint. The bridge is, however, as Mr. Jackson, the engineer, puts it, an "engineer's bridge."

Each of the granite centerpieces is elaborately carved. On the Boston side is the city seal on both inner and outer face, while the seal of Cambridge is carved on the faces of the Cambridge side of the center span.

The two stone abutments are hollow, a construction which greatly lessens the weight of the structure. In fact, from end to end the bridge has been built with a view above all to strength and durability, as far as this did not detract from architectural standards. The cost of the bridge amounted to a little over \$2,500,000.

The old West Boston bridge, which was torn down to be replaced by the new one, was a landmark of considerable historical interest. In the latter part of the eighteenth century a company was incorporated, which, on March 9, 1792, was empowered by an act approved by John Hancock to build a bridge from Boston at a point near the pesthouse, so-called, to Pelham's Island, Cambridge. The bridge was begun in the summer of 1792, and on Nov. 23, 1793, was opened for traffic. The structure was wooden, 46 feet in width—a plank bridge on piles, which were soon destroyed by worms, and were replaced by oak as fast as was consistent with economy and prudence.

The cost was \$22,000, paid for by tolls, which were collected for 48 years.
